SELECT COMMITTEE ON CONSUMER CREDIT

Proceedings of hearings held at the  
Parliament Buildings, Toronto, Ontario,  
on the 28th day of October, 1964.

October 28, 1964

1 ---UPON COMMENCING AT 10:00 A.M.

2 THE CHAIRMAN: This morning, as you  
3 know, we are to hear from Professor Robert W.  
4 Johnson, Professor of Industrial Administration, the  
5 School of Industrial Administration, Purdue University.  
6 Mr. Johnson, Professor Johnson, as you know, is  
7 an authority in this subject and we are very fortunate  
8 to have him with us this morning. We extended an  
9 invitation to him a few weeks ago and he very kindly  
10 has consented to come and give us the benefit of  
11 his experience in this field and we will ask him now  
12 to proceed.

13 PROFESSOR JOHNSON: I am very pleased  
14 to appear at the invitation of this Committee and let  
15 me proceed with my statements. As far as I am  
16 concerned you are welcome to interrupt at any time  
17 and question me as we go along, or at the end.

18 One of the major points at issue  
19 is the manner in which finance charges on consumer  
20 instalment credit should be expressed to the consumers.  
21 In our thinking we should distinguish this requirement  
22 from the methods by which the finance charge might  
23 be calculated or the form in which the size of the  
24 finance charge might be limited. We are concerned  
25 solely with the manner in which the finance charge  
26 is expressed to consumers.

27 If we examine the present methods  
28 of disclosing finance charges we can detect two  
29 distinct patterns. Some finance charges are in a  
30 rate form. That is, they are presented on the basis of

1 a percentage in relation to some time period, a year  
2 or a month or on the basis of dollars per hundred  
3 dollars of unpaid balance in relation to a given  
4 time period. Others are in a dollar form. That is,  
5 the finance charge is presented in absolute dollar  
6 amounts. Which form is better for consumers? Is  
7 there some one form that can be adopted, a common  
8 denominator, by the majority of credit grantors  
9 in the interest of consumers?

10 These are questions of major  
11 significance to the consumer credit industry today.  
12 There are three basic reasons typically advanced  
13 for the interest rate form of disclosure as a  
14 supplement to the dollar form. (1) promotion of  
15 economic stabilization, (2) prevention of the excessive  
16 use of consumer credit and (3) improvement of the  
17 consumer's ability to compare finance charges.  
18 Let us examine each of these in turn.

19 First, with reference to promotion of  
20 economic stabilization. Even a Province as large and  
21 economically important as Ontario cannot expect to  
22 contribute significantly economic stabilization of the  
23 nation by requiring the statement of finance charges  
24 as annual rates. For that matter even a federal law  
25 would not accomplish this goal. Interest charges are  
26 only a small part of the total cost of credit serving  
27 consumers. In addition, because financial institutions  
28 obtain a large portion of their funds under  
29 long term arrangements only a portion of their total  
30 interest costs will vary over the business cycle.

1 Consequently consumers cannot expect to find that  
2 their financing costs will vary, or can't expect to  
3 find, that their financing costs will vary only  
4 slightly if at all from boom to recession.

5                   Moreover this variation in the cost  
6 of credit will be such a small portion of the total  
7 cost of the product or service financed that it  
8 will not serve to encourage or discourage their  
9 use of consumer credit. For example, assume that the  
10 dollar add-on rate for financing new cars moves  
11 from \$6.00 per hundred per annum to \$7.00 per hundred  
12 per annum in a period of boom. An unusually large  
13 increase of 1/6th. On a 36 month contract the  
14 monthly payment on a \$2,000.00 unpaid balance would  
15 rise from \$65.56 to \$67.22. This slight increase  
16 would hardly be expected to cause consumers to  
17 withdraw from the new car market and so dampen the  
18 boom. In contrast, reduction of credit charges  
19 during a recession will not attract buyers to the  
20 market when their outlook is pessimistic and when  
21 they fear loss of income. These unhappy days, as  
22 one credit man remarked, even the people who don't  
23 intend to pay aren't buying.

24                   Because the demand for credit is  
25 largely derived in the demand for the goods or  
26 service acquired, changes in finance charges, however  
27 expressed, will have little effect on decisions to use  
28 credit. There is no evidence -- now with reference  
29 to preventing the excessive use of credit -- there is  
30 no evidence to suggest that the expression of finance

1 charges as simple annual rates will prevent excessive  
2 use of consumer credit. In the first place there is  
3 little indication that consumer credit is used  
4 excessively. The report of the Royal Commission on  
5 Banking and Finance states that most consumers "have  
6 made sensible use of instalment and other credit to  
7 acquire physical assets that yield them high returns  
8 not only in financial terms but in terms of  
9 convenience and ease of household living". Although  
10 there is no evidence that consumers in general are  
11 making excessive use of credit, it is clear that  
12 some consumers do abuse their credit. Unfortunately  
13 excessive use of credit is probably found most  
14 frequently among those who are least able to afford  
15 it. The question before us is whether or not statement  
16 of finance charges as annual rates will prevent the  
17 excessive use of credit by these individuals. As I  
18 shall try to show later, those who are economically  
19 and educationally deprived are least able to understand  
20 annual finance rates and most susceptible to conceal-  
21 ment of finance charges however expressed. Thus a  
22 statement of finance charges as an annual rate may  
23 only add to their misuse of credit by giving them the  
24 apparent protection of provincial law but no real  
25 protection.

26 Now third, to strengthen consumer's  
27 ability to compare finance charges. Even if we cannot  
28 dampen the swings of the business cycle or protect  
29 the poor from excessive use of credit, we can still  
30 seek a more uniform method of stating charges so that

1 consumers who would shop for credit can make wise  
2 decisions to the extent that they shop more intelligent-  
3 ly the market for consumer credit or perform more  
4 effectively to protect their interests. The choice  
5 rests between the dollar form of statement, the rate  
6 form or both dollar and rate as recommended by the  
7 Royal Commission.

8 Since the crux of the issue lies  
9 with the use of a rate form of statement, let us  
10 examine this proposal from the point of view of the  
11 feasibility for the industry and desirability for  
12 the consumer.

13 First with respect to feasibility  
14 for the industry. While true simple annual rate is  
15 not at all simple to calculate, there are a number  
16 of formulas available by which it can be approximated.  
17 So long as all credit grantors use the same formula  
18 for all transactions, adequate comparability could  
19 be achieved. The constant ratio formula used by the  
20 Royal Commission is most frequently recommended. While  
21 satisfactory for most uses it does produce bothersome  
22 inaccuracies in comparison of rates on contracts of  
23 differing maturity. For example, with add-on rates  
24 above \$6.00 per hundred per year, the annual rate  
25 approximated by the constant ratio method appears to  
26 be lower on 18 month contracts than on 36 month contracts.  
27 However, the reverse is actually the case if one compares  
28 the two simple annual rates. This defect is of slight  
29 importance in relation to the other problems of  
30 feasibility.

1                   You are undoubtedly aware of the  
2 problems of stating in advance the annual rate on  
3 revolving credit plans. Retailers have done themselves  
4 a disservice by referring to their charge as a  
5 monthly rate of  $1\frac{1}{2}\%$ . It is not a monthly rate. It  
6 is a charge amounting to  $1\frac{1}{2}\%$  of the balance at the  
7 beginning or end of the month. It gives to recognition  
8 to changes in the level of the credit balance during  
9 the month. In contrast, the rates charged by credit  
10 unions, moneylenders and small loan companies are  
11 monthly rates in that the dollar charge is determined  
12 by the amount of credit granted in actual number of  
13 days use. One must make three assumptions to equate  
14 the monthly charge of  $1\frac{1}{2}\%$  to an annual rate of 18%.  
15 First the charge must be levied on the balance at  
16 the beginning of the month. This seems to be a  
17 relatively uniform practice, although there are  
18 exceptions. Second one must assume that the first  
19 month's use of credit is free. Thus if one buys a  
20 \$50.00 item on October 5, he must be assumed to have  
21 26 days of free credit. Were we to take account of  
22 this period of time the effective annual rate would  
23 be less than 18%, but impractical to calculate at  
24 the time of the transaction. Now, however, that there  
25 are many other types of delayed credit plans where  
26 we would not consider the initial period as free in  
27 determining the annual rate. For example retailers  
28 selling furnaces or air conditioning units often offer  
29 consumers the opportunity to delay their first payment  
30 for several months. Consistency of treatment would

1 demand that the calculation of an annual rate covers  
2 the period of free credit on both revolving credit  
3 and delayed payment plans.

4 Third, one must assume that the  
5 payments on revolving credit accounts are made on the  
6 billing date, precisely 30 days from the date of  
7 the opening balance on which the credit charge is  
8 levied. This is an unrealistic assumption, clearly  
9 unsupported by the billing practices of retailers  
10 and the payment habits of consumers.

11 When one also considers that retailers  
12 often specify a minimum monthly charge, it does not  
13 appear feasible to provide a statement of a simple  
14 annual rate on revolving credit accounts and similar  
15 forms of open end credit such as cheque credit and  
16 charge account banking.

17 However, it is possible to state  
18 clearly in advance the method by which the charge  
19 is levied and to record monthly the dollar amount  
20 of the credit charge. It is certainly desirable that  
21 this information be given the consumer and it is  
22 generally the trade practice to do so.

23 A second area where it would not be  
24 feasible to provide consumers with a simple annual  
25 rate of finance charge is in the case of add-on  
26 contracts. Retailers often permit customers to buy  
27 on the instalment plan and to add new items to the  
28 contract with an appropriate adjustment to the number  
29 and amount of monthly payments. Sometimes only the  
30 number of payments and the amount of the last payment

1 are changed. In other cases the size, number and  
2 amount of payments are changed. While the retailer  
3 can, and should, tell the consumer the amount of  
4 the dollar finance charge on each transaction, the  
5 clerk on the floor would be incapable of ascertaining  
6 the simple annual rate. Moreover it is difficult  
7 to conceive of a manual that might be located in  
8 the central credit department that could quickly  
9 provide the simple annual rate as the credit  
10 purchases are telephoned in from the floor. A  
11 requirement that the finance charge be stated as  
12 a simple annual rate would virtually rule out this  
13 type of credit service or drive the price of the  
14 service into the cash price of the merchandise.

15 A third area of doubtful feasibility  
16 concerns instalment contracts with unequal payments,  
17 skipped payments and delayed first payments. For  
18 example school teachers request skipped payments  
19 over the summer months. The simple annual rate would  
20 vary depending on the time of year in which the  
21 contract was initiated and the maturity of the contract.  
22 Farmers, fisherman and loggers are other people who  
23 seek and obtain instalment contracts especially  
24 adjusted to their needs. Nor do all contracts require  
25 that the first payment be made exactly 30 days from  
26 the date of the contract. A survey of the loans made  
27 at the First National Bank of Boston, Mr. Robert  
28 Iery, Vice-President and officer in charge of the  
29 personal credit department found that of 601 loans  
30 made during one week in July, 1963, 14% had first

1 payments falling due less than 25 days after the  
2 loan was granted and 59% had a scheduled first  
3 payment in 35 days or more and only 4% in exactly  
4 30 days. It is again readily possible and clearly  
5 desirable that consumers be told the amount of their  
6 dollar finance charge on instalment contracts  
7 involving unequal payments, skipped payments and  
8 delayed first payments. Through the use of elaborate  
9 tables it would be possible to provide information  
10 concerning the simple annual rate. However, the  
11 complexities involved would appear to rule against  
12 this type of credit adjusted to the needs of the  
13 consumer.

14 To summarize our conclusions  
15 concerning feasibility. It appears a statement of  
16 the dollar finance charges is always possible except  
17 in the case of revolving credit and other forms  
18 of open end credit. The dollar charge must be  
19 shown after the transaction rather than before it.  
20 It does not seem possible to show in advance the  
21 simple annual rate on revolving credit and add-on  
22 instalment contracts and it is cumbersome on a large  
23 proportion of contracts that are not precisely uniform  
24 as to spacing an amount of monthly payments.

25 If consumers are to shop among  
26 various credit sources all credit sources must state  
27 the finance charge in a uniform manner. This is  
28 fundamental. To require the charge to be stated as  
29 an annual rate would require exceptions with substantial  
30 areas of consumer credit. Rather than make exceptions

1 to accommodate the rate form of statement, it would  
2 seem preferable to insist on the dollar form of  
3 statement and allow no exception.

4 Now with respect to the desirability  
5 for the consumer. There seems to be no question that  
6 a statement of the dollar finance charge is desirable  
7 from the point of view of consumers. Even when  
8 consumers could easily calculate the dollar finance  
9 charge, they should be spared the effort and the  
10 dollar finance charge should be clearly shown on the  
11 face of the contract. The real issue is whether the  
12 statement of a simple annual rate adds enough to the  
13 understanding of the debtor to make it worthwhile  
14 in view of the costly difficulties of providing  
15 the information.

16 Essentially credit grantors are being  
17 asked to adopt a two price system -- dollars and  
18 rates. Similarly we might ask grocers to provide  
19 a two price system for the sale of eggs -- price by  
20 the dozen and by the pound. Let us focus our  
21 attention on the kinds of credit decisions faced  
22 by consumers in order to evaluate the proposed two  
23 price system. What type of comparison is the two  
24 price system supposed to facilitate?

25 Statement of the simple annual rate  
26 would certainly enable consumers to compare their  
27 finance charges to the rates of return they receive  
28 on their savings. However, this is not a major  
29 accomplishment. Studies indicate that users of  
30 consumer credit are not often faced with the alternative

1 of using savings or using credit. They use credit  
2 because they do not have adequate savings or because  
3 they wish to retain their hard won savings. Few are  
4 so deluded that they believe the rates earned on  
5 their savings exceeds the rates paid for the use  
6 of credit.

7 A more common and much more  
8 important decision to the consumer is whether to  
9 use credit to acquire a good or service now or to  
10 wait, save and buy later for cash. Here it seems  
11 crucial to provide consumers with a statement of the  
12 dollar finance charge. When we finance something  
13 we give up something. The advantage of having a  
14 television set today rather than later must be  
15 weighed against the golf clubs or a new dress that  
16 cannot be purchased because of the finance charge  
17 on the television set. Since consumers shop for  
18 golf clubs in dollars and not in percentages the  
19 dollar form of statement is highly significant and  
20 the rate form adds little to this decision unless  
21 it is confusion.

22 A third form of comparison that a  
23 consumer may wish to make is between the finance  
24 charges on instalment contracts of the same length.  
25 The apparent purpose of this comparison would be to  
26 obtain financing from the cheapest source available  
27 given the credit status of the consumer. If this is  
28 the sole purpose either the annual rate or the  
29 dollar finance charge will suffice, as may be seen  
30 in table 1. Here we see that we could look at either

1 the total time price or the finance charge or the  
2 annual rate and in all cases this evidence alone  
3 would lead us to select contract A.

4 If the consumer is not indifferent  
5 between these two credit sources A and B, which form  
6 of statement is most useful to him. If B, which is  
7 the higher priced store or contract is more convenient-  
8 ly located, does the consumer wonder if it's worth  
9 saving \$5.00 to walk an extra mile or does he relate  
10 the walk to the saving of 3.0%? As in the previous  
11 example consumers probably judge sacrifices best in  
12 terms of dollars. Five dollars will buy something  
13 whereas 3% will not.

14 Finally, a consumer may wish to  
15 compare the finance charge on a 12 month contract  
16 with that on a 24 month contract. Presumably the  
17 purpose would be to determine if the lower monthly  
18 payment carried by the longer contract were desirable  
19 or to see if one contract were cheaper than the other.  
20 This poses a very difficult conceptual problem for  
21 which I have no ready answer. Let us assume the two  
22 alternative contracts shown on table 2. Here we  
23 see the alternatives of the 12 month contract versus  
24 the 24 month contract. If we take the 24 month  
25 contract it will lower our monthly payments from  
26 \$27.50 per month to \$14.75 per month. And, as one  
27 might expect, the annual rate on the 24 month contract  
28 is a little lower than the annual rate on the shorter  
29 contract. The annual rate on the 24 month contract  
30 is 17.3 as compared to 18.5 on the 12 month contract.

1 Which contract, however, is cheaper  
2 depends on your concept of the cost of credit. In  
3 terms of dollars contract A is cheaper -- a \$30.00  
4 finance charge as compared with a \$54.00 finance  
5 charge. In terms of annual rate contract C is  
6 cheaper -- 17.3% rate as compared to an 18.5% rate.  
7 This divergent information is the penalty of a two  
8 price system. How would we advise the consumer.  
9 If you were advising your son or daughter, how would  
10 you advise them as between contract A and contract C?  
11 Would we recommend that he seize the opportunity  
12 to lower his monthly payments and at the same time  
13 save 1.2% per annum or do we warn the consumer that  
14 the penalty for stretching out the maturity of the  
15 contract in order to lower the monthly payment is  
16 an added finance charge of \$24.00? Percentages  
17 give one message, dollar amounts another message.  
18 To me the dollar figures give a meaningful message  
19 and encourage the consumer to save money by selecting  
20 the shorter contract. The percentage figures alone  
21 give an incorrect message and the combination of  
22 percentage and dollars give static. However, my  
23 views cannot solve the problem, they can only raise  
24 an issue.

25 Finally we must consider whether it  
26 is fair to consumers to create a situation in which  
27 some but not all credit grantors will be in a position  
28 to bury a portion of the finance charge in the cash  
29 price of goods and services sold on credit. If  
30 legislation is properly drawn the cash lenders cannot

1 bury their finance charges and so will be at a  
2 competitive disadvantage over those offering sale  
3 or vendor credit. Legislation should encourage  
4 fair and open competition, not handicap one segment  
5 of the industry at the expense of another or encourage  
6 the deception of consumers under the guise of  
7 protecting them.

8                   The Royal Commission has noted that  
9 "the effective competition will keep the cash price  
10 at realistic levels". Let us examine this  
11 assertion. First we can point to a number of types  
12 of consumer credit where finance charges are already  
13 buried in the cash price. In these cases effective  
14 competition is evidently not operated to reduce the  
15 cash price. This is true of regular charge accounts  
16 at department stores, gasoline credit cards and other  
17 credit card arrangements. Second, the assertion  
18 implies that whereas consumers do not shop wisely  
19 for credit they will suddenly become shrewd and shop  
20 to compare cash and credit prices. Probably those  
21 who are most abused by the combination of high pressure  
22 merchandising with credit are those who are least able  
23 to afford it. In his excellent study of the shopping  
24 habits of the poor people of New York City, David  
25 Kappelvitz observes that these people are victimized  
26 because they do not comparison shop. They do not  
27 compare cash prices nor do they compare time and cash  
28 prices. If the rate form of statement were required  
29 the door-to-door peddler can easily build all or a  
30 portion of the finance charge into the cash price. He

1 does so already with the dollar charge. If his  
2 customers do not compare cash and time prices now  
3 why will they suddenly do so if the rate form of  
4 statement is required?

5 In fact you do these people a  
6 disservice by passage of legislation that is alleged  
7 to protect them when in reality is offers unscrupulous  
8 credit sellers one more means of deceiving their prey.

9 Finally, we should recognize that  
10 it would be relatively easy to build a portion of  
11 the credit charge in the cash prices. Especially  
12 when competitors are doing the same thing. At the  
13 moment there is no great incentive to do so with  
14 the result that there is a reasonably fair price  
15 discrimination between the cash buyers and credit  
16 buyers at department stores, for example. On a  
17 six months revolving credit plan with free credit  
18 for the first month, a  $1\frac{1}{2}\%$  charge in each month  
19 adds up to  $5\frac{1}{4}\%$  to the total cost of the merchandise  
20 because of the monthly reductions in the unpaid  
21 balance. At present the retailer is happy to have  
22 his credit customers bear a portion of the cost of  
23 credit. If faced with the alternative of advertising  
24 his rates, incorrectly as we have seen, at  $18\%$  per  
25 annum or burying  $5\frac{1}{4}\%$  somewhere in a combination of  
26 higher prices or lower quality or fewer services and  
27 so on, one can hardly blame a retailer for joining  
28 his competitors and burying all or a portion of the  
29 finance charge. He would appear thereby to offer  
30 a lower rate than the credit unions or chartered banks

1 but in reality this would not be the truth but a  
2 deception.

3 It should be added that the credit  
4 retailer is not immoral for following this practice.  
5 When he sells an item he offers a package of  
6 services, credit, delivery, display, advertising,  
7 convenience of location and so on. He is free  
8 to price these services separately or to recover  
9 their cost in the prices of the merchandise. He  
10 must achieve that combination of prices that will  
11 gain him the greatest return. To interfere directly  
12 in his price strategy would involve the provincial  
13 government in the most intricate for of price  
14 regulation.

15 In summary my recommendation would  
16 be that the dollar finance charge be clearly stated  
17 at the inception of the transaction on all forms  
18 of consumer instalment credit offered by all types  
19 of credit grantors, with the exception of revolving  
20 credit and other forms of open end credit. For the  
21 latter type of credit the method of calculating the  
22 finance charge should be clearly stated on the agree-  
23 ment made with the consumer, the dollar charge shown  
24 on all subsequent bills.

25 There are other important matters  
26 also under consideration by this Committee. These  
27 are possible limitations on downpayments, right of  
28 repossession, cooling off period and standard forms  
29 of contracts, warranties and so on. Let me comment  
30 on these briefly.

1 Limits on downpayments are designed  
2 to restrict or encourage the use of consumer and  
3 instalment credit in order to counteract the business  
4 cycle. When adequately administered they are  
5 generally effective in influencing the volume of  
6 consumer instalment credit. However, one should not  
7 underestimate the difficulty of enforcing the  
8 regulations and determining, for example, whether  
9 the car traded in actually provided sufficient  
10 value to meet the legal requirements. More important  
11 determination of the proper timing and degree of  
12 control on downpayments is extremely difficult.  
13 As we demonstrated in the United States, it is easy  
14 to overdo the control and bring about a recession  
15 or delay the control and thus let the boom run to  
16 excess.

17 Finally, control over downpayments  
18 squeezes only one segment of the consumer credit  
19 market. Cash lenders would probably find their  
20 business rising while those offering vendor credit  
21 would be forced to contract. For example, in the  
22 United States when we had regulation W, small loan  
23 companies financed an amazing amount of medical bills.  
24 Doctors were getting paid all over the country.  
25 This is unfair and substantially reduces the effective-  
26 ness of control. In short the difficulties of  
27 administering regulations on downpayments equitably  
28 seem almost insurmountable. It would appear better  
29 to leave consumer credit to the operations of general  
30 monetary controls.

1 With respect to right of repossession.  
2 Probably the right of repossession should be placed  
3 in the fuller context of collection laws. Without  
4 more adequate knowledge of Canadian law let me  
5 make only two comments. First there is an intimate  
6 relationship between the rights of the credit grantor  
7 and the rights that he must be allowed. If you  
8 restrict his rights to prevent or reduce credit  
9 losses you must at the same time allow him a higher  
10 rate to cover those credit losses. Since Canadian  
11 small loan companies are already restricted to very  
12 low rates, weighting the right of repossession more  
13 in favour of the creditor -- debtor, rather, excuse  
14 me, typographical error -- would suggest an even  
15 greater need to raise the allowed rates on small  
16 loans.

17 A second point is that unusually  
18 harsh collection laws appear to foster consumer  
19 credit bankruptcies. For example, if garnishment  
20 laws absorb too large a portion of the consumer's  
21 income, he can hardly be blamed if he takes the easier  
22 way out through bankruptcy. The conclusion seems to  
23 be that the law must protect the rights of credit  
24 grantors to a point so that the good risks do not  
25 have to pay too much for the poor risks. However,  
26 the law should also prevent undue harassment or  
27 deprivation of the consumer.

28 With respect to the cooling off  
29 period. While I have not studied the matter with  
30 care it does seem desirable to have a period of three

1 or four days during which the buyer of goods or  
2 services outside of an established retail store  
3 could withdraw from an instalment contract without  
4 penalty. Many of the credit abuses cited by  
5 Kapplevitz in his book The Poor Pay More stem  
6 from the door-to-door seller. The housewife trapped  
7 in her home by a high pressure salesman deserves  
8 the opportunity to be rescued from the contract  
9 when her husband comes home. Undoubtedly problems  
10 will lie in forcing the spirit of the law, but this  
11 is one area in which vigorous enforcement appears  
12 to be especially desirable.

13 Few consumers are willing to take the  
14 time to read through the fine print in most instalment  
15 contracts. In view of this fact it seems particularly  
16 desirable to make such contracts as uniform as possible  
17 so that the consumer faces the same legal situation  
18 each time he secures instalment credit. The dollar  
19 finance charge and the total unpaid balance and  
20 the number and amount of monthly payments should be  
21 prominently displayed. We could also invent a  
22 device which could prevent consumers from signing  
23 contracts in blank and make a major contribution to  
24 the wide and effective use of consumer instalment  
25 credit.

26 If I can expand or clarify parts  
27 of this analysis I would be very happy to try to do  
28 so.

29 THE CHAIRMAN: Thank you, Professor  
30 Johnson.

1 Mr. Sedgwick, would you like to --

2 MR. SEDGWICK: I have only one or  
3 two questions. This question has been asked of other  
4 witnesses. Do you know of any jurisdiction which  
5 has adopted legislation providing for a statement  
6 of the charges as a percentage rate?

7 MR. JOHNSON: The state of Connecticut  
8 allows credit grantors to state either the dollar  
9 charge or the annual rate

10 MR. SEDGWICK: But it does not  
11 compel them to state the percentage rate?

12 MR. JOHNSON: It does not compel  
13 them to state the percentage. I believe that in  
14 Hawaii industrial banks must state the percentage  
15 on their contracts.

16 MR. SEDGWICK: I see. Then do you  
17 know of any jurisdiction which adopted legislation  
18 of that kind and later abandoned it?

19 MR. JOHNSON: No, sir. It would be  
20 nice if we could persuade some state to try it out.  
21 But unfortunately no one is willing to volunteer.

22 MR. SEDGWICK: Oh and then, you  
23 are of course familiar with the Douglas Bill and you  
24 are familiar with that provision in it which is in  
25 section 4, paragraph 7, which says "amongst things  
26 which are to be disclosed is the percentage which  
27 the finance charge bears to the total amount to be  
28 financed expressed as a simple annual rate on the  
29 average outstanding unpaid balance of the obligation."  
30 What is the present position legislatively of that

1 Bill, Professor?

2 MR. JOHNSON: It was of course  
3 defeated in the main committee and referred back to  
4 the subcommittee. The last draft I saw Senator  
5 Douglas had backed off from a common denominator  
6 and on the revolving credit or open end credit would  
7 permit those credit grantors to state the rate as  
8 a monthly rate and it seems to now be coming up with  
9 two common denominators in terms of rate -- one an  
10 annual rate and one a monthly rate and then of  
11 course in all cases it would require the dollar charge.

12 MR. SEDGWICK: I see. Well then, I'm  
13 looking at page 10 of your brief -- it has been said  
14 to this Committee that while it may be difficult to  
15 work backward from the dollar rate to find the percent-  
16 age, the lender or giver of credit is always aware  
17 of the rate that he is charging and therefore it  
18 would not be difficult for him to state it.

19 MR. JOHNSON: It would be possible  
20 on uniform cash loans to state the simple annual rate  
21 on the assumption that the contract is going to be  
22 fulfilled precisely in accordance with the terms of the  
23 contract and so that cash lenders could get a manual  
24 from some financial publishing house and could come  
25 up with an annual rate. Now when you introduce  
26 variations such as a delay in the first payment or  
27 skipped payments and so on, then you get into quite  
28 a substantial manual. I just was fiddling around last  
29 night and assuming that a bank made loans of \$100 to  
30 \$3,000 in ten dollar steps, it would give them 290

1 different sizes of loans. And assuming that maturities  
2 ranged from 3 months to 36 months, giving them 34  
3 different types of maturities, and assuming that  
4 the date of first payment ranged from 15 to 45  
5 days -- which is probably, well let's say give them  
6 a fair lag in the first payment from 15 to 75 days,  
7 which gives them 60 different alternatives there.  
8 290 times 34 times 60 is, if my arithmetic is  
9 right, and it seldom is, gives you 591,600 different  
10 contracts and since each contract would have to  
11 specify four main items -- the monthly payment, in  
12 even dollars, the dollar finance charge, the  
13 percentage finance charge and the uneven amount  
14 of the last payment -- this would give him a table  
15 (again subject to my bad arithmetic) some 2,366,400  
16 entries. So that while it is possible, one ends up  
17 with a pretty cumbersome manual. And I have not yet  
18 in these calculations -- because I got sleepy --  
19 determined how many variations would be introduced  
20 by skipped payments.

21 MR. WHICHER: Do the banks in the  
22 United States give the interest rates on each one  
23 of those loans now?

24 MR. JOHNSON: No. In the banks in  
25 the United States they will show, for example in  
26 New York State law, the banks in New York State  
27 are required to show the dollar finance charge. No  
28 bank to my knowledge in the United States shows the  
29 simple annual rate. The banks in Michigan, for  
30 example, show on the note only the number of payments

1 and the amount of each payment. I don't think this  
2 is good because I think it should show the number  
3 of payments, the amount of each payment, the amount  
4 of credit extended and the dollar amount of the  
5 finance charge.

6 MR. WHICHER: In Canada is it not  
7 correct that the banks do show the interest rate  
8 now on each and every note?

9 MR. LAWRENCE: No. I don't think so.

10 MR. WHICHER: Yes but on a simple  
11 one -- 90 days after date I promise to pay \$500.00  
12 to the Royal Bank of Canada at an interest of 6% --

13 MR. SEDGWICK: Oh, yes, they show  
14 it on that.

15 MR. JOHNSON: This is not an instal-  
16 ment note though.

17 MR. SEDGWICK: Oh yes, on all fixed  
18 obligations it presents no problem. Indeed you have  
19 to do it, to make a bill or note that complies with  
20 the Bills of Exchange Act, you can't approximate your  
21 interest, you must state it and you must state whether  
22 that applies before or after maturity. But that  
23 poses no problem.

24 MR. OLIVER: How many less would there  
25 be if the stipulation was removed that they had to  
26 put the percentage on?

27 MR. JOHNSON: Well, part of the problem  
28 is if you eliminate the percentage -- let me go back  
29 to the First National Bank of Boston. You may have  
30 delayed first payment, as I said, ranging anywhere from

1 15 to over 45 days -- I don't know how far over 45  
2 it goes -- they don't vary the dollar finance charge.  
3 In other words, the dollar finance charge would be  
4 the same on any one of those 60 alternatives.  
5 Because it is too much trouble for them to try to  
6 vary the finance charge and allow for that lag or  
7 acceleration of the first payment. I couldn't  
8 figure it out quickly for you here, but you eliminate  
9 that 60 entry item. You would eliminate all of those  
10 variations attributable to the lag in the first  
11 payment simply because they show the dollar finance  
12 charge and they don't worry about whether they are  
13 getting 11.2 or 11.7 or 12.1 --

14 MR. OLIVER: If the dollar finance  
15 charge was constant wouldn't the percentage charge  
16 also be constant?

17 MR. JOHNSON: No. You see, if I  
18 lend you \$500.00 and charge you \$1.00 finance charge  
19 on each hundred dollars to get me a nice rate. If  
20 I lend you that amount of money it makes a considerable  
21 difference to you as to when you start making payments  
22 on that note. If you start 15 days from now it's  
23 a pretty high rate, whereas if I allow you to delay  
24 for 50 days until your first payday, then the rate  
25 goes down substantially and it's most affected by  
26 that initial period of delay because of the time value  
27 of money. That first payment has the greatest effect  
28 upon the simple annual rate. So a \$100 finance  
29 charge on a \$500 credit is -- the dollar finance  
30 charge is constant but the rate will vary depending on

1 when your first payment is.

2 THE CHAIRMAN: Mr. Irwin?

3 MR. IRWIN: Mr. Chairman, Professor --  
4 should I call you Professor or Dr. Johnson?

5 MR. JOHNSON: Either way. Bob  
6 Johnson is the common way.

7 MR. IRWIN: I should say before I  
8 ask these questions that I have studied the same  
9 subject matter as you have and I am also a chartered  
10 accountant in public practice for a number of lending  
11 institutions, with whom I have discussed these  
12 problems at some length. I have to say in all  
13 fairness that my conclusions from my studies are  
14 almost totally contrary to your.

15 I would like, rather than deal with  
16 a particular statement in your brief, it might save  
17 a lot of time if I put the questions to you in more  
18 general terms to see if we can reconcile some of the  
19 conclusions that seem to be evolved from the same  
20 basic information.

21 First I think to set this in proper  
22 perspective, the terms of reference for this Committee  
23 as I understand them, are to take a broad look at  
24 the entire gamit of all credit granting facilities in  
25 the Province of Ontario, not only cash loans but  
26 purchase loans. So we have looked at mortgage lending,  
27 at institutional lending by trust companies and  
28 insurance companies, by people operating under our  
29 Small Loans Act, by people dealing in retail conditional  
30 sales contracts and also by department stores dealing

1 in revolving credit and budget plans or add-on  
2 purchase arrangements.

3 With that in mind the Committee is  
4 attempting to discover some common means of expression  
5 and declaration throughout the entire lending  
6 industry and we aren't confining ourselves to the  
7 revolving credit purchase, add-on type of contract.

8 With that in mind, if I may make  
9 the comment, it would appear to me that in pages 5  
10 to 11 where you are dealing with the difficulties  
11 of the feasibility, that you are confining yourself  
12 almost entirely to the difficulties related to  
13 revolving credit or add-on type of contract and as  
14 far as I can detect have said nothing in your brief  
15 in regard to all other forms of lending with which  
16 the Committee is concerned.

17 I agree with you that if you are  
18 confining your remarks solely to the feasibility of  
19 expressing finance charges as a rate percentage only  
20 in respect to revolving credit and the add-on type  
21 of contract, then to a very large extent your remarks  
22 are -- I agree with them because I have found that  
23 there are very substantial difficulties in this type  
24 of contract.

25 However, having said that I would then  
26 ask you if you felt that your remarks, which are  
27 apparently related to that type of contract, would  
28 also apply to all other types of lending?

29 MR. JOHNSON: Well, with equal validity.  
30 I would quite agree, I think it excellent that this

1 Committee is examining the whole field of consumer  
2 credit, all aspects of it. This is one of the  
3 great deficiencies of the Douglas Bill in that it  
4 deals only with one small portion of the consumer  
5 credit contract. And as you may know in the United  
6 States there is at present a very mammoth study  
7 under way by the National Conference of Commissioners  
8 on Uniform State Laws to try to develop a uniform  
9 consumer credit code or a model act which would cover  
10 disclosure among many other facets. So I think this  
11 is an excellent approach and vastly better than the  
12 Senate Committee on Production Stabilization.

13                   However, when we start to examine  
14 I think we should make a break between commercial  
15 credit and consumer credit, although problems of  
16 making that break are fairly considerable. When  
17 Mrs. Murphy finances a refrigerator to put in her  
18 boarding house, is that consumer credit or commercial  
19 credit? Leaving that aside, let's say we can define  
20 somehow what we mean by consumer credit. Well,  
21 within that area I think it is perfectly valid to  
22 search for a common denominator. My point would be  
23 that it must be a common denominator. You must have  
24 the consumer faced with alternative sources of credit,  
25 all of whom are stating the charge in the same manner.  
26 The reason that I emphasized the problems of retail  
27 credit is because this is where the problems lie.

28                   MR. IRWIN: Could I correct you to  
29 say there are forms of retail credit granting that  
30 don't involve the revolving credit or add-on credit

1 type?

2 MR. JOHNSON: Right. And there  
3 they could show the simple annual rate on the  
4 assumption of the contract.

5 MR. IRWIN: In other words if we  
6 are dealing with a conditional sales contract as  
7 we know it in Ontario where, at the beginning of  
8 the contract, the principal amount borrowed is  
9 known and declared, the total finance charges are  
10 known and declared and the aggregate of the payments  
11 are known and declared, would you agree that there  
12 is no great mathematical difficulty in determining  
13 a rate percentage which would be approximately  
14 accurate if you used the constant ratio method  
15 but would be in fact accurate if you used an actuarial  
16 method.

17 MR. JOHNSON: Certainly.

18 MR. IRWIN: So that where you are  
19 dealing with the type of contract such as a conditional  
20 sales contract or the small loans contract or a  
21 mortgage contract, that there is no mathematical  
22 difficulty about reaching a very, a fairly accurate  
23 rate by known methods.

24 MR. JOHNSON: Yes. My point is that  
25 if some can abide by the law and some cannot abide by  
26 the law -- and I think we agree that some can and  
27 some can't -- then I think our point of disagreement  
28 is that I am unwilling to pretend that we are enabling  
29 the consumer to shop for credit. In fact we do not  
30 enable him to shop for credit if we have developed a

1 common denominator which in fact is not common. If  
2 the consumer will be told the simple annual rate  
3 when he buys from a sales finance company but he  
4 physically cannot be told the simple annual rate  
5 when he finances the same item for the same dollar  
6 amount but puts it on an add-on contract.

7 MR. IRWIN: I quite agree with you, while  
8 in my opinion it is both feasible and practicable  
9 to require disclosure as a rate percent. I am not  
10 recommending it, I am simply commenting as a presumed  
11 qualified person to comment. You would agree that  
12 it is feasible and possible to require this type  
13 of disclosure in all other forms of contract except  
14 the revolving credit or the add-on?

15 MR. JOHNSON: With the provision,  
16 of course, that I think the effect will be to rule  
17 out variations in the contract made for the benefit  
18 of the consumer such as skip payments and delayed  
19 first payments.

20 MR. IRWIN: I think the skip payment  
21 situation could be dealt with later. I think that  
22 it can be dealt with. I just wanted to establish  
23 the area of our agreement and disagreement. In fact  
24 we agree that -- if I interpret correctly what you  
25 said -- that with respect to all other forms of  
26 contract it is feasible to declare a rate, determine  
27 a rate, on a fairly accurate basis, but the revolving  
28 credit or the add-on purchase type of contract is  
29 an animal of a different colour and might have to be  
30 dealt with differently.

1 MR. JOHNSON: Yes. If we can amend  
2 it to say mathematically feasible. It may not be  
3 economically feasible.

4 MR. IRWIN: Well, this I agree, it  
5 may not be. Let's say there are other considerations  
6 than pure mathematical feasibility or even adminis -  
7 trative feasibility. This I would agree with. But  
8 I think it is important to establish that your  
9 comments are, as to feasibility, are related only  
10 to revolving credit and the add-on type of contract.  
11 Is that correct?

12 MR. JOHNSON: With indications of  
13 economic unfeasibility --

14 MR. IRWIN: Yes, that's granted. Well  
15 then we are not so far apart as I had thought. I  
16 want to emphasize that there is agreement then as  
17 to all other forms of contracts as to feasibility.

18 One other general question I would  
19 like to ask. This suggestion has been made here in  
20 a number of cases, a number of sections, and that is  
21 the general thought of there being some form of  
22 incomprehensibility if you are using a percentage rate.  
23 That this could be confusing to the consumer, that  
24 he wouldn't understand it. I must admit that here  
25 we are in an area of opinion rather than fact. On  
26 feasibility I think we are in an area of fact that  
27 can be established while the area of comprehensibility  
28 is an area of opinion. But this is how it appears  
29 to me and I would like your further elaboration on this.  
30 For instance you refer, on page 12, to the two price or

1 two standard comparison and you quote about the  
2 consumer going to buy some eggs. This is how I  
3 view the thing and I am glad you introduced the egg  
4 situation because when a buyer goes into a grocer and  
5 he wants to buy some eggs and he wants to know the  
6 price of eggs. Because of other standards of  
7 quantitative and qualitative measurement that have  
8 been written into the laws or into the practice. The  
9 borrower goes in to grocer A and says: "How much  
10 is the price of eggs". And he tells him .55¢ and  
11 he goes into grocer B and he tells him the price of  
12 eggs is .60¢. Now the interesting thing to me is  
13 that the consumer only asks to compare the price  
14 because he knows that the standard of quotation is a  
15 dozen eggs of grade A. Now when you get to the case  
16 of money how can you quote money in terms of money?  
17 In other words where is the evaluation of money  
18 analogous to a dozen eggs? If you want to measure  
19 the value of money I submit that you cannot use money  
20 as the standard measurement of the quantitative amount  
21 received.

22 MR. REILLY: Why not, it's being  
23 done every day.

24 MR. IRWIN: You should not, let's put  
25 it that way because of this. When economists want to  
26 determine the value of money in 1960 as compared with the  
27 value of money -- of the dollar -- in 1940, they don't  
28 use dollars to express the valuation. They compare  
29 it with the change in a standard price level. I think  
30 this suggests that you can't measure the change in the

1 value of dollars by dollars. Similarly I don't see  
2 how you can measure the value of the dollars lent  
3 to you by lender A or lender B in terms of dollars  
4 themselves. You have to have a quantitative measurement  
5 and I suggest that the quantitative measurement that  
6 is taught in our schools and is used as a quantitative  
7 measurement by mortgage companies, by banks, by  
8 small loans companies, by sales finance companies and  
9 so on, is a percentage rate. In other words, so many  
10 dollars per hundred dollars for one year.

11 MR. REILLY: That is used by everybody  
12 except the consumer.

13 MR. IRWIN: Well, I'm not arguing  
14 the case, I'm just asking for an opinion. Is it not  
15 true that the way of measuring the quantitative  
16 value of dollars received is in terms of percent with  
17 the meaning in this case being the amount of charge  
18 made for the use of \$100.00 for one year. And this  
19 is mathematically shortened into percent per annum.

20 MR. JOHNSON: Again I think one has  
21 to get back to the purpose for which this measurement  
22 is being made. And keeping in mind that it is the  
23 consumer's interest we have in hand rather than the  
24 businessman's interest we have in hand. If one  
25 gets back to the purpose then I would still feel he  
26 gets back into this classification of I want to compare  
27 contract A versus contract B. If that's the purpose  
28 it is just as easy to look and say one has a \$35.00  
29 finance charge and the other has a \$30.00 finance  
30 charge. Or even more, if you want to go to different

1 terms then I think you get into a thoroughly mixed up  
2 situation, again referring to page 14 of my testimony  
3 in table 2 where you have dollar finance charge  
4 giving you one message and the percentage finance  
5 charge or rate giving you an entirely different  
6 message.

7 MR. MACDONALD: May I interrupt? If  
8 our purpose here is to resolve a mixed up set of  
9 circumstances that make it difficult for the consumer  
10 to come to a conclusion, isn't the only way to solve  
11 it to come to a common standard of how it is presented?

12 MR. IRWIN: Well, I think one has  
13 to get into the actual transactions that the consumer  
14 is faced with. I think professors tend to argue  
15 in terms of percentages because this is the way  
16 professors think, or the way they think they like  
17 to think. But I think if one goes out to the consumer  
18 who is faced with saving or buying something now  
19 or between buying a refrigerator from this retailer  
20 or financing it from a small loan company, he is faced  
21 with a somewhat different conflict than we are used  
22 to thinking of in commercial transactions. He is  
23 faced with saying shall I go for a 24 month contract  
24 rather than a 12 month contract and thereby lower my  
25 monthly payments. I don't see that you have helped  
26 him one bit making this decision by telling him:  
27 "Ha, if you will only lighten the term of the contract  
28 you lower your annual rate from 18.5% to 17.3". I  
29 think we have to think through to the kind of trans-  
30 action the consumer faces, not the kind of transaction

1 a bank faces or an automobile company faces. We have  
2 to get down to the consumer's alternatives.

3 Here is the consumer in Ontario --  
4 I am talking about the average consumer, myself as  
5 a consumer or many people I meet in the course of  
6 my business -- how can it possibly help this man,  
7 how can it help but confuse this man if, here is the  
8 average citizen, he has bought a house with a mortgage  
9 and it is quoted to him as a percent. He has bought  
10 a Canada Savings Bond and it is quoted to him as a  
11 percent. He has some savings in the bank and it  
12 is quoted to him as a percent. He wants to borrow  
13 money and he goes to the bank and it's quoted to him  
14 as a percent. Now he goes to buy a car and the  
15 percent measure disappears. Now how is he helped  
16 by suddenly finding the method of expression changed?

17 MR. JOHNSON: Well, one can have  
18 different methods of expression within different  
19 markets. He is not faced with a choice between  
20 buying a house and buying a television set.

21 MR. IRWIN: Why does it differ? It  
22 doesn't differ. He is still dealing with borrowing  
23 money.

24 MR. REILLY: As you pointed out,  
25 Mr. Irwin, when he goes for a mortgage he goes for  
26 money, when he goes to a bank he is going for  
27 money, when he buys a bond he is borrowing money.  
28 Now where's the difference?

29 MR. IRWIN: Well, let's ask Mr.  
30 Johnson that. What is he buying when he buys a car and

1 he has to finance it?

2 MR. JOHNSON: He's buying a trans-  
3 portation service.

4 MR. IRWIN: No. When the dealer  
5 tells him, "Here, it all adds up and you owe me  
6 \$1,000.00". What is the consumer buying. He has  
7 already bought the transportation by signing the  
8 contract. He could have bought the transportation  
9 with 100% of the cash price. I ask you as an economist  
10 what is he buying with regard to this \$1000.00.

11 MR. JOHNSON: He is buying  
12 essentially three things. He is buying services in  
13 the sense of somebody investigating his credit and  
14 making a monthly collection.

15 MR. IRWIN: Is he not doing that if  
16 he buys from the bank?

17 MR. JOHNSON: Sure, any consumer  
18 credit --

19 MR. IRWIN: Sure. There is quite  
20 a difference there, isn't there?

21 MR. JOHNSON: He is buying an  
22 assumption of risk on the part of the credit grantor.

23 MR. IRWIN: Is he not doing this if  
24 he gets it from the bank?

25 MR. JOHNSON: And he is buying what  
26 an economist calls forbearance. That is, that the  
27 bank or the credit grantor --

28 MR. IRWIN: At the bank he is paying  
29 for the same thing. So the three factors you mention  
30 are common. Those three factors are common if he goes

1 to the bank or to a small loans company or to the  
2 dealer. So where is the difference.

3 MR. WHITE: Well Mr. Johnson is  
4 arguing that the bank would 'nt show the charge in full.

5 MR. JOHNSON: There is no question  
6 that the bank would show the dollar charge too.

7 MR. IRWIN: No, but they are not  
8 doing so now. And a lot of other lending sources  
9 are not doing so now. So why reverse the trend that  
10 has been clearly established in Canada at any rate, and  
11 in Ontario at any rate, the majority of the credit  
12 sources are using a percentage rate. Why do we switch  
13 over when we come into another type of situation?  
14 Granted related to, but only related to, a consumer  
15 purchase?

16 MR. JOHNSON: Well, for the reason --

17 MR. IRWIN: Because the three factors  
18 you mentioned are common.

19 MR. JOHNSON: For the reason you  
20 expressed. You are moving from a commercial area  
21 to the consumer area.

22 MR. IRWIN: Well the consumer here  
23 in Canada -- I don't know how it is in the States --  
24 but our banks, our chartered banks, are very active  
25 in personal loans and a man buying a car actually  
26 has a choice. He can go to the bank, he can go to  
27 a small loans company, he can go to a sales finance --  
28 well, he can't go direct to a sales finance company --  
29 or he can go to a dealer.

30 MR. JOHNSON: Well, my argument would

1 be that if I were advising a consumer actually, once  
2 he determines the car he wants and the maturity that  
3 he feels he can afford, then I would say to him:

4 "Shop around, find the lowest time price".

5 MR. LAWRENCE: You might advise  
6 him to go to the banks. He might find he can get  
7 it cheaper there.

8 MR. JOHNSON: He might very well.  
9 I'm certainly not holding forth that the banks ought  
10 to express a percentage because particularly if it  
11 said a 6% discount and in effect this is confusing,  
12 it is not equal to a mortgage rate of 6%. I'm  
13 arguing -- and I thought I made the point in my paper --  
14 that when a consumer goes out to shop for credit he  
15 should have a common denominator. It seems to me  
16 in the consumer credit field the common denominator  
17 that is meaningful is the common denominator that  
18 the consumer uses to shop for all his products, the  
19 dollar.

20 MR. IRWIN: But apparently in Ontario  
21 this isn't true. If he goes to the small loans he  
22 has to be quoted a percent. It's required by law.  
23 And he knows the dollar charges as well. If he went  
24 to an institutional lender, one of which is represented  
25 here, he will be quoted a monthly rate percent. And  
26 the dollar charges. Now I can't understand -- there  
27 is, in fact, the common denominator in practice, in  
28 substantial sources of credit in Ontario, but the  
29 same standard is not expended over into this dealer  
30 contract. Now if we are looking for a common denominator

1 why should we abandon the practice in a substantial  
2 part of the field that is already established in  
3 order to adopt an alternative method which is used  
4 in another part of the field.

5 MR. JOHNSON: Well, essentially you  
6 are looking for a common denominator. I think we  
7 would agree on that. And I thought you and I had  
8 agreed that there was one common denominator that  
9 could not be common, namely the percent per annum.

10 MR. IRWIN: No. Only in respect  
11 to revolving credit is there any difficulty about  
12 the means of expression. We are dealing here with  
13 the purchase of an automobile from a dealer and I  
14 know from experience because I deal with many dealers  
15 of automobiles, and the contract is the standard  
16 time payment contract with no variations.

17 MR. JOHNSON: Doesn't it show the  
18 dollar finance charge?

19 MR. IRWIN: Oh, yes, but it does  
20 not show the percent charge. And yet you agree that  
21 it could show the percent charge without too much  
22 difficulty.

23 MR. LETHERBY: Well, Mr. Johnson, I  
24 think this is your view. According to Mr. Irwin if  
25 you buy a home the mortgage company spells out the  
26 interest charge. If you go to the bank and borrow  
27 money they say it's 6%, and so forth. You are maintain-  
28 ing why in hell can't they say this is going to cost  
29 you so much money in dollars to borrow this. Suppose  
30 they say in the bank, all right, the rate is 6% and then

1 I ask in return how much is this going to cost me  
2 to repay the loan in dollars and cents to borrow  
3 that amount of money. Is that your argument?

4 MR. JOHNSON: Exactly it.

5 MR. IRWIN: Well of course I don't  
6 disagree with this. I agree that those who now  
7 are quoting in percent should also continue to  
8 quote the percent and dollars. Therefore everybody  
9 should quote interest in dollars --

10 MR. LETHERBY: That's my argument too.  
11 Wouldn't it be nice if the borrower could at the same  
12 time find out how much in both, so he can tell his  
13 mother and his grandmother how much it is costing.

14 MR. IRWIN: In other words we should  
15 be looking for two common denominators. But these  
16 two common denominators are not common. You might  
17 say two methods of expression -- that everybody  
18 quote in dollars and cents and then -- (rest inaudible)

19 I would like to refer in particular  
20 to your illustration on page 14 in which you pose the  
21 question as to how does the consumer evaluate the  
22 12 month and the 24 month contract. You point out  
23 that the 12 month contract is a higher rate but a  
24 lower dollar finance charge and the 24 month contract  
25 is a lower rate and a higher total finance charge.  
26 Now I grant you that this is a question of opinion.  
27 But again I am dealing practically -- I emphasize the  
28 fact that I have had many years experience in business  
29 dealing with businessmen, working directly with the  
30 consumer in some instances, and this problem presented

1 to the consumer is evaluated, in my opinion, in this  
2 way. It is quite true, as Mr. Letherby points out,  
3 he must know how much is this going to cost him in  
4 dollars and he wants particularly to know how much  
5 does he have to pay per month, in order to finally  
6 reach a decision. But the interesting thing is,  
7 and I draw this from experience, that under contract A  
8 he has to raise \$27.50 a month and under contract B  
9 he only has to raise \$14.75 a month. Frankly my  
10 experience is he will elect the 24 months contract  
11 for the very good reason that he has another 12 months  
12 income with which to meet the extended payments and  
13 as a young man, let's say, struggling to get started,  
14 and I have a daughter and son-in-law who are facing  
15 this problem, they actually elect the 24 months  
16 contract because it's easier to carry. In other words  
17 it's a squeeze on them if they have to take the 12  
18 months contract at \$27.50. It's much easier for them  
19 to carry the burden if it's only \$14.75 for the first  
20 12 months and then there is another 12 months' income  
21 with which to carry the other \$14.75 and at the same  
22 time they are getting a lower rate.

23 MR. REILLY: Mr. Irwin, on what does  
24 your daughter and son-in-law base their decision.

25 MR. IRWIN: Largely on my advice. For  
26 heaven's sake take the \$14.75.

27 MR. REILLY: You would advise them  
28 to take the \$14.75.

29 MR. IRWIN: That is quite true, Mr.  
30 Reilly. I have never suggested that this isn't a vital

1 piece of information. But at the same time -- take  
2 the position of my own son and daughter as an example.  
3 They wanted to buy a new car and I didn't interfere  
4 with it in any way. They went around and shopped for  
5 their credit. And they came back and said: "My golly,  
6 we can get a loan from the bank for \$1,500.00 at 6%  
7 and this is what we are going to take". Why? Because  
8 they had come to me with the dealer's scheme and I  
9 said: "Well, you know you are paying 15% here". So  
10 then they went to the bank and they came back joyfully  
11 with 6%. See? This is what we are going to do. So  
12 I said: "Well, wait a minute. If we work it out  
13 really you are going to be paying 12," say, so that  
14 sort of cooled off the bank's proposition. Finally  
15 the decision was made and they did go to the bank --  
16 I'm not promoting the banks here -- with all deference  
17 to those present -- but they did go to the bank on  
18 two counts. The bank was willing to give them a 36  
19 months contract, which is an awful long contract,  
20 as opposed to the 24 months contract of the dealer.  
21 The monthly charges with the bank were less because  
22 of the longer contract and the rate of interest was  
23 less. So having had all the factors presented to them  
24 they made their decision. I just suggest to you that  
25 a 24 months contract, even on the basis of a dollar  
26 statement only, in most cases for most people is a  
27 more attractive proposition.

28 MR. JOHNSON: If you had told your  
29 daughter and son-in-law that the 26 months contract  
30 was cheaper than the 24 months contract?

1 MR. IRWIN: Yes, I did, and I know  
2 what you are coming to. In dollars of finance charges  
3 they are paying more under the 36 months contract.  
4 There is no question about that. But considering  
5 that they have two more years income to meet those  
6 extra charges and they are in fact getting a lower  
7 rate per hundred per annum, they are getting a cheaper  
8 deal.

9 MR. MACDONALD: You should have given  
10 them a cheque and saved them a lot of trouble.  
11 (Laughter)

12 MR. IRWIN: That's about it, Dr.  
13 Johnson. I hope that doesn't mean you are for longer  
14 and longer terms on consumer credit.

15 MR. JOHNSON: Well actually that is  
16 the tendency as you probably well know, they are getting  
17 longer and longer.

18 THE CHAIRMAN: Mr. Whicher? Do you  
19 have any questions?

20 MR. WHICHER: No, I don't.

21 THE CHAIRMAN: Mr. Bukator?

22 MR. BUKATOR: No, I haven't. This  
23 Committee hasn't done me much good. Because within  
24 the last two or three months, after sitting here for  
25 three years, I went out and borrowed \$30,000.00.

26 THE CHAIRMAN: Mr. Lawrence?

27 MR. LAWRENCE: No.

28 THE CHAIRMAN: Mr. MacDonald?

29 MR. MacDONALD: Mr. Chairman, I want  
30 to examine something on page 11 to see if I have got it

1 clear. On page 11 you say: "If consumers are to  
2 shop among various credit sources, all must state  
3 their finance charges in a uniform manner. This  
4 is fundamental. The requirement that the charge be  
5 stated as an annual rate would require exceptions  
6 in substantial areas of consumer credit. Rather  
7 than make exceptions to accommodate the rate form  
8 of statement, it would be preferable to insist upon  
9 a dollar form of statement to allow no exceptions."  
10 Now, if I understand this correctly from Mr. Irwin's  
11 discussion with you, you have really examined only  
12 the revolving account form of credit, not the whole  
13 field?

14 MR. JOHNSON: Well I have, outside  
15 of the Committee, examined the whole field, but since  
16 time was limited, the major problem of providing the  
17 information that Mr. Irwin would like, lies in the  
18 field of vendor credit.

19 MR. MACDONALD: Well the thing that  
20 puzzles me though is you have gone through an analysis  
21 of the difficulty of relating it to this one area,  
22 and a relatively small area of consumer credit, and  
23 then you suddenly come to a conclusion that all must  
24 state the finance charges in a uniform manner. And  
25 therefore you plunk for the dollar. Are you doing  
26 this because this is the only way you can do it and  
27 not make an exception?

28 MR. JOHNSON: I am not sure how  
29 unsubstantial it is if you add up the total of revolving  
30 credit, cheque credit, charge account banking and other

1 forms of open end credit that may yet come along.  
2 For example in the States I just read in the Wall  
3 Street Journal the other day that Carte Blanche is  
4 going to start financing hospital bills, which would  
5 again be a form of open end credit.

6 MR. MACDONALD: Well I don't know  
7 whether any purpose will be served in getting clari-  
8 fication as to what percentage the revolving accounts  
9 are to the overall, but I would think it would be  
10 in the range of 10 to 15%.

11 MR. SEDGWICK: I wonder if he is  
12 right. On October 20th in presenting a brief to  
13 a House of Commons Committee the Chairman of the  
14 Committee, Mrs. Wilson, on planning of consumers  
15 organizations gave these figures -- and they are  
16 interesting -- DBS figures of balances outstanding  
17 in millions: Sales finance companies for consumer  
18 goods, 942 million; small loan companies for cash  
19 loans, 786 million, small loan companies for instalment  
20 credit, 49 million and then department stores, 419  
21 million.

22 MR. MACDONALD: How much?

23 MR. SEDGWICK: 419 million.

24 MR. MACDONALD: What percentage is  
25 that of the overall?

26 MR. SEDGWICK: Well, I'll give it  
27 to you in a minute. Appliance stores 188 million  
28 and then answering a question that was asked yesterday  
29 as to whether the banks are important -- chartered  
30 banks personal loans 2,168 million or something close

1 to 50% of the total. So the banks are a very important  
2 factor. Somebody asked yesterday whether we could  
3 go ahead although we do not control the banks. You  
4 can see from those figures they represent something  
5 better than 40% of the total amount of personal loans.

6 MR. MACDONALD: Yes, but are we  
7 arguing the same point? I'm talking about what  
8 percentage of the overall of consumer credit is in  
9 revolving credit accounts.

10 MR. SEDGWICK: I don't know, but  
11 assuming that the figure for department stores,  
12 419 million, represents mostly revolving credit --

13 MR. IRWIN: The representative from  
14 the department stores said it is about 40% of all  
15 their sales.

16 MR. SEDGWICK: These aren't total  
17 sales. These are end of June balances outstanding in  
18 millions. So they wouldn't be the kind of credit  
19 that you just pay during the month. I don't know  
20 how much of that would be revolving credit, but  
21 the department stores are 419 million.

22 MR. IRWIN: I checked with Eaton's  
23 and Simpson's and the figure is roughly 50% of  
24 their balances are just on sort of open account basis  
25 and the others are standard.

26 MR. SEDGWICK: If that is true  
27 throughout, there would be something of the order  
28 of 208 million dollars, which isn't an inconsiderable  
29 figure.

30 MR. MACDONALD: Only one tenth of the

1 banks alone.

2 MR. SEDGWICK: That is true.

3 MR. MACDONALD: Therefore it would  
4 be only 3 or 4% of the overall.

5 MR. WHITE: Well are you arguing that  
6 it is not significant and we shouldn't include it then?

7 MR. MACDONALD: I'm not arguing that  
8 it is insignificant. I'm just countering the argument  
9 that Professor Johnson was making that this is very  
10 important. He even tried to bolster his argument  
11 by saying there are a lot of new fangled revolving  
12 credit things that may be coming in. But let's  
13 deal with reality. The reality is that revolving  
14 credit is only 3 or 4 or 5% of the overall picture,  
15 at least in the Province of Ontario.

16 MR. SEDGWICK: These are Dominion  
17 figures.

18 MR. ROWE: I think it is important  
19 as a total dollar value, but what we are trying  
20 to get at is the number of people involved.

21 MR. MACDONALD: That may be true too,  
22 but I want to come back to the basic point I was  
23 making. The analysis of the difficulties with  
24 reference to revolving credit, and at least on volume  
25 in Canada, this is 3 or 4%. So in Canadian terms  
26 the solution that you come to -- because of the  
27 difficulties in coping with a volume of 3 or 4% and  
28 the difficulties of stating percentage, you recommend  
29 a standard procedure that will deal with them and will  
30 ignore the other 97%.

1 MR. JOHNSON: Well, let me make two  
2 points. First of all with dollars obviously wouldn't  
3 ignore the other 97% because they would be required  
4 to show dollars as well. But also let me point out  
5 on the basis of the analysis and on the figures  
6 just provided, that there is some, according to  
7 my arithmetic, some 1,410,000,000 of consumer  
8 instalment credit which would be subject to the  
9 burial problem. I am adding the amount in the hands  
10 of sales finance companies, the 49,000,000 small loan  
11 companies and the 419,000,000 in department stores --  
12 if my arithmetic is correct that is 1,410,000,000.  
13 This is no small percentage or dollar amount and  
14 the essential point here is you are setting aside  
15 two segments of the industry. You are telling the  
16 cash lender: "We are going to draw a law properly  
17 so that there is no possibility of your burying the  
18 finance charge" -- and I hope you do, but you are  
19 saying to those people offering vendor credit: "You  
20 must state the dollar finance charge but of course  
21 we don't want to get into price control regulations  
22 so we will make no effort and can make no effort to  
23 control your cash price".

24 MR. IRWIN: Mr. Johnson, could I  
25 suggest that you are on to a chiefly different criticism  
26 rather than the one of dealing with the mathematical  
27 and administrative feasibility. It's another argument  
28 but it doesn't really, if I may suggest, enter into  
29 this particular question. While I would be glad to  
30 discuss this problem with you -- I recognize that it

1 exists -- but I don't feel that it relates to  
2 commentary on mathematical feasibility or comprehension.

3 MR. JOHNSON: I didn't realize he  
4 was still on mathematical feasibility.

5 MR. MACDONALD: Well, let me get  
6 to -- I have only half made the point I am trying  
7 to make -- on page 11 you in effect come to the  
8 conclusion, I think I am fair in saying, after  
9 assessing the difficulties of revolving credit --  
10 we should have one uniform standard. If we can't  
11 have one common denominator you have more than one  
12 and it becomes a contradiction in terms. Now one  
13 goes to page 19. "In summary my recommendation would  
14 be that a dollar finance charge be clearly stated  
15 at the inception of the transaction in all forms  
16 of consumer instalment credit offered by all types  
17 of credit lenders with the exception of revolving  
18 credit and other forms of open end credit. In the  
19 latter type of credit the methods of calculating the  
20 finance charges should be clearly stated in the agree-  
21 ment made with the consumer and the dollar charges  
22 shown on all subsequent totals." Now surely this is a  
23 contradiction. On page 11 you say you must have one  
24 standard, a dollar standard, and on page 19 you come  
25 to the final conclusion you can have two standards.

26 MR. JOHNSON: You are showing them  
27 the dollar amount in both cases.

28 MR. MACDONALD: You want dollar  
29 amounts in both cases?

30 MR. JOHNSON: Oh, yes.

1 MR. LETHERBY: Right through, straight  
2 across the board.

3 MR. JOHNSON: Right through, yes.

4 MR. MACDONALD: But in fact coming  
5 to Canada on the upper group, all other consumer  
6 instalments, other than the revolving credit, it is  
7 now done on a percentage basis. Are you in effect  
8 saying that to achieve a dollar standard so that  
9 we have an objective of one standard, one common  
10 denominator, in effect you are advising us that we  
11 should get away from the confusion engendered by  
12 having percentages in all instalment buying.

13 MR. JOHNSON: My impression was you  
14 do not have a uniform percentage in respect to all  
15 other form of consumer credit.

16 MR. MACDONALD: This is true in that  
17 we --

18 MR. JOHNSON: Isn't this the problem.

19 MR. MACDONALD: This is what we must  
20 resolve in this Committee.

21 MR. JOHNSON: That's right.

22 MR. LETHERBY: You see, Mr. Johnson,  
23 according to your statement, the dollar is shown and it  
24 would solve the problem in this revolving credit,  
25 wouldn't it?

26 MR. JOHNSON: Yes.

27 MR. LETHERBY: Because if they were  
28 to show in revolving credit the amount of percentage--  
29 you know, for instance the T. Eaton or Simpson's people  
30 charge -- it would be fantastic. People would say:

1 "Good heavens, they are charging 2 or 3 or 400%."  
2 But if you show that they are only charging, let's  
3 say, a few cents for the credit, on a dollar basis,  
4 you would escape trouble right there. So do they.

5 MR. IRWIN: Mr. Letherby, I think  
6 it has been brought out here just in the last couple  
7 of days, that these large department stores you  
8 refer to are actually, in many parts of Canada,  
9 using a percentage expression, and others in other  
10 jurisdictions are actively --

11 MR. REILLY: Not on an annual rate,  
12 though, Mr. Irwin.

13 MR. IRWIN: No, not on an annual  
14 rate, that's true.

15 MR. LETHERBY: I stand solidly  
16 behind your thinking, son, that you show the dollar  
17 every time.

18 MR. MACDONALD: Then let's add on  
19 the percentage to that and give them both.

20 Mr. Chairman, there is just one other  
21 point I want clarification on because it didn't  
22 jibe with what I understood to be the case.

23 Do I understand you to say that  
24 the Douglas Bill in the United States deals exclusively  
25 with revolving credit?

26 MR. JOHNSON: Oh, no, I didn't mean  
27 to give that impression. The Douglas Bill attempts  
28 to deal with all forms of credit, including mortgage  
29 credit and on most forms of credit would require dollar  
30 and simple annual rate, but on revolving credit -- and

1 I am a little hazy as to what other items are thrown  
2 into that hopper -- certainly revolving credit,  
3 charge account banking credit and possibly other forms,  
4 but let's agree at least those three are in -- on  
5 those form he argues for a monthly rate. Because  
6 you see the problem is it's not a monthly rate, it's  
7 a charge levied on the balance as of the beginning  
8 of the month or the end of the month and bears  
9 no relation to a time charge.

10 MR. SEDGWICK: Well, I will read  
11 you the section. It says: "They shall furnish to  
12 such persons, prior to agreeing to extend credit  
13 under such a plan, a clear statement in writing  
14 setting forth the central monthly or annual percentage  
15 rate or rates at which a finance charge will be  
16 imposed on the outstanding, unpaid balance." This  
17 is the July 24 revision.

18 MR. JOHNSON: I had forgotten he  
19 put in the "outstanding, unpaid balance".

20 MR. SEDGWICK: That's in italics.  
21 That was inserted in this revision.

22 MR. JOHNSON: You couldn't do it  
23 possibly on a daily basis unless you had a high  
24 powered computer.

25 THE CHAIRMAN: Mr. White?

26 MR. WHITE: I just want to make one  
27 little observation and that is that this end of June  
28 balances, stated by Mr. Sedgwick, do not in fact show  
29 the volume of credit being granted in these categories  
30 because the credit granted in some of these groupings,

1 like department stores, will be very much shorter  
2 in all likelihood than certain others like the  
3 chartered banks. And so if the average credit  
4 extended by department stores is six months and the  
5 average by banks is a year and a half, you would  
6 have to weight these balances and I think it is  
7 undeniable -- I mean we would all insist -- that  
8 revolving credit accounts and similar credit  
9 transactions be included in the legislation. I  
10 think this is the proof that it is a significant  
11 avenue of credit. I think we are all in agreement  
12 on that point.

13 Now I would like to turn to a little  
14 different matter for a moment. At the bottom of  
15 page 21 and the top of page 22 you have said it  
16 seems advisable to have a period of three or four  
17 days in which a buyer of goods or services outside  
18 of standard retail stores could withdraw from an  
19 instalment contract. The assumption is implicit that  
20 most retail stores are reputable and that many  
21 door-to-door sales undertakings are not. And I  
22 would accept the assumption. But I am wondering if  
23 there is any harm done if you had a relatively short  
24 period like 48 hours of applying this to all contracts.  
25 I can't see that the reputable retailer would be  
26 injured by that. I can't see why we couldn't make  
27 that universal, which is one of the things you wanted  
28 to apply in the statement of cost of credit.

29 MR. JOHNSON: I take it you would  
30 apply it to retail obligations, not cash transactions?

1 That's a question I am asking you, really. You see,  
2 the problem in cash, as I see it, is that the  
3 credit lender is involved in a considerable expense  
4 of looking the man up and what have you, and if  
5 he comes in one day later and says: "Well the horse  
6 finished first and I can pay you back now," or "I  
7 don't want a file any more", or something like this.  
8 I think you are probably being unfair to the  
9 cash granter. As applied to all retail obligations,  
10 I just don't know. I hadn't really thought it through  
11 to that extent. I would certainly, I think, argue  
12 for it on door-to-door selling. You would have to  
13 make some provision for how you would handle  
14 mail order sales and I can't give much advice there  
15 either. You may want to say that all retail  
16 obligations under a certain dollar amount, to try  
17 to get into this economically and educationally  
18 depressed group, and not worry about the people  
19 who are able to buy a \$500.00 television set or  
20 something.

21 MR. WHITE: If it were possible  
22 to cancel out a contract, say within 48 hours, even  
23 at retail stores, this would likely provide an  
24 automatic policing against unfair terms, even in  
25 retail establishments. If somebody gets too frisky  
26 with credit charges, they can expect the merchandise  
27 to come back the next day.

28 MR. JOHNSON: Or if the merchandise  
29 as delivered turns out not to be what he bought in  
30 the store. This sort of thing, of course, is another

1 type of abuse.

2 MR. WHITE: I can't see any great  
3 danger in that and I just wondered if you did?

4 MR. JOHNSON: I don't, but not  
5 because I don't but just because I haven't looked  
6 into the field carefully enough to warrant any  
7 expressed opinion on it. I think the problem, if  
8 you go into the real areas of credit abuses in the  
9 United States anyway, it's from the door-to-door  
10 peddlars and the poorer sections of the city. For  
11 example I recall one credit transaction where a  
12 woman bought a set of shower curtains and paid \$20.00  
13 for the set in easy monthly payments from a door-to-  
14 door peddler. It turned out that she could have  
15 bought the identical set at Macy's Department Store  
16 for \$2.00. Now you could say there was an \$18.00  
17 finance charge. But in fact, of course, what the  
18 door-to-door peddler said was there was no finance  
19 charge but it's just \$2.00 a week for 10 weeks. No  
20 kind of disclosure bill of any sort is not going  
21 to protect this consumer. I feel we are in an area  
22 of legislation here where we are trying to draw a  
23 blanket law to apply to all credit grantors when we  
24 really are concerned about the credit grantors who  
25 are taking advantage of people in this income,  
26 educational class. And I think this is a general  
27 problem of legislation, that one draws legislation  
28 and the only people who live by it are the ones you  
29 didn't worry about in the first place. And the people  
30 you are worried about, namely the door-to-door peddler,

1 I think this provision giving the consumer the  
2 right to return the goods after four or five days  
3 and wash the whole transaction out, I think that  
4 one provision may be vastly more helpful to the  
5 kind of people I am concerned about than any  
6 form of disclosure.

7 MR. WHITE: Well, I think maybe that's  
8 the charter point. As a matter of fact it is perfectly  
9 true that type of buyer dealing with relatively large  
10 items of expenditure can jerk the vendor around a  
11 lot. If he were able to cancel out on a contract  
12 in 48 hours I think this might, on occasion, be  
13 used as a bargaining method. I am thinking of the  
14 business in which I was occupied at one time, where  
15 large contractors deal with relatively small equipment  
16 houses. In this case the scale is so low it is  
17 against the vendor in some instances and this would  
18 aggravate that situation.

19 MR. MACDONALD: That's not typical  
20 of a consumer deal though.

21 MR. WHITE: No, but I think maybe  
22 Mr. Johnson's point is well taken that you might  
23 start this as a conservative approach to such things.

24 MR. MACDONALD: Not only as a  
25 conservative approach. I think the point you raise is  
26 a very good one and we should take a look at it, and  
27 if it doesn't raise difficulties across the board,  
28 because as a general principle laws should be univer-  
29 sally applicable, they shouldn't discriminate. But  
30 it seems to me that the justification for discrimination

1 is that if you buy from a department store you know  
2 where that department store is. You can go back  
3 and you at least know who you are dealing with.  
4 With a door-to-door salesman you can't find him  
5 and if you do find him he has sold the paper in the  
6 interval. So you are dealing with a finance company.

7 MR. JOHNSON: Yes. I think this is  
8 a justification for this discrepancy. This has been  
9 reported over and over again in New York. When the  
10 consumer had a complaint he couldn't find anybody  
11 to complain to.

12 MR. SEDGWICK: In that connection,  
13 Professor, you are of course familiar with the  
14 provisions of the English Hire-Purchase Act?

15 MR. JOHNSON: Yes, that's right.

16 MR. SEDGWICK: It has a cooling off  
17 period. It uses the phrase where the document is  
18 signed at a place other than appropriate trade  
19 premises. I was just curious to know whether there  
20 are any other jurisdictions that have similar cooling  
21 off provisions?

22 MR. JOHNSON: Not to my knowledge  
23 but I haven't investigated the laws abroad to that  
24 extent. Also the Molony Committee did not recommend  
25 the simple annual rate.

26 MR. SEDGWICK: That is true. They  
27 did not.

28 MR. WHICHER: Mr. Chairman, is it not  
29 true that with firms such as Eaton's and Simpson's or  
30 Macy's that we now have a cooling off period? I mean

1 if you buy something you can send it back even in  
2 two weeks probably and it may not be a law but in  
3 fact there is a cooling off period.

4 THE CHAIRMAN: That's just the policy  
5 of the company, but it is true.

6 MR. WHITE: You really didn't touch  
7 on another recommendation that has come to us, but  
8 I would like your opinion on it. At the present  
9 time in at least one Province in Canada it restricts  
10 the rights of the vendor in repossession to goods  
11 actually sold and it precludes collateral chattel  
12 mortgages being taken on goods already possessed by  
13 the purchaser. We are giving some thought to this  
14 idea. Have I made it clear?

15 MR. JOHNSON: Well, let me switch  
16 to the U.S. In the U.S., for example, small loan  
17 companies will lend, make a cash loan and as collateral  
18 take, I guess it would be a lien, on the furniture,  
19 let's say, so the effect would be the same. What  
20 you would do would be to prohibit that lien, as  
21 I understand it?

22 MR. WHITE: This would actually, I  
23 think, apply only to conditional sales contracts.  
24 Right now a person may go and buy a refrigerator  
25 and complete a conditional sales contract and that  
26 provides the vendor with a chattel mortgage on a  
27 stove or such like that he already owns.

28 MR. JOHNSON: We ran into, in a great  
29 many areas, a great many abuses on this where a  
30 person would buy an end table on instalment and then a

1 sofa on instalment and then finally a whole series  
2 of furniture on instalment and then the last lamp  
3 he bought he would miss one payment and they would  
4 clean out the flat. The laws have, I think, been  
5 generally reconstructed in the States to prevent this  
6 sort of thing. I think the credit vendor should  
7 determine the credit at the time of each transaction  
8 on the basis of the consumer's current ability to  
9 pay and should not be in a position to reach back  
10 on all the items he has previously financed and pick  
11 up those as well. Especially in the U.S. there is  
12 very little repossession of furniture and this sort  
13 of thing. Cars, yes, but very little in any household  
14 items. It's not worth repossessing really.

15 MR. WHICHER: Do they ever repossess  
16 a car and then the poor fellow who had it taken  
17 away from him had to pay additional money?

18 MR. JOHNSON: Well, the contract  
19 calls for, let's say, \$1,000.00 balance and you  
20 repossess the car. I recall one finance company man  
21 said he had been around to repossess the car and  
22 they had the hind wheels off and had cut a hole in  
23 the side and it was being used as a chicken coop.  
24 (Laughter). Well, if they repossess that and manage  
25 to get \$200.00 out of it and there is a \$1,000.00 note,  
26 the finance company is legally entitled to attempt  
27 to pursue the customer for the remaining \$800.00.

28 MR. WHICHER: Supposing the car  
29 was still in excellent shape? And they sold it for  
30 \$800.00 --

1 MR. JOHNSON: Then they would be  
2 entitled to seek the other \$200.00. They seek it  
3 but don't generally get it.

4 MR. WHITE: Well I think in this  
5 Province, having repossessed the goods, they cannot  
6 then seek any further balance.

7 MR. SEDGWICK: Oh yes they can.  
8 I have one question, Mr. Chairman. It relates to  
9 what Mr. White said. Professor Johnson, as you  
10 of course will know, the draft Douglas Bill excludes  
11 from that Bill business firms, and the English  
12 legislation also provides that the Act shall not  
13 apply to any hire-purchase agreement or credit  
14 sale agreement which is made by or on behalf of  
15 a body corporate as the hirer or buyer. Would you  
16 favour the exclusion of corporations from any  
17 proposed legislation?

18 MR. JOHNSON: Corporations and  
19 partnerships, yes. But that still leaves a great  
20 area which we haven't really come to any good  
21 conclusion on. What is a consumer credit  
22 transaction when your young son buys a lawnmower  
23 to make money mowing lawns, is that a consumer credit  
24 transaction or is that a commercial transaction?  
25 When Mrs. Murphy finances her refrigerator to put  
26 in her boarding house, is it commercial or a consumer  
27 credit transaction?

28 MR. SEDGWICK: Yes. Speaking now  
29 of the Douglas Bill, the English statute seems to  
30 make it specific in that it provides that the protection

1 that the Act affords applies to persons but not to  
2 bodies corporate.

3 MR. JOHNSON: I certainly would  
4 exclude the bodies corporate, but that still leaves --

5 MR. SEDGWICK: That's what Mr. White  
6 was talking about, bodies corporate, in one of  
7 his examples and they are excluded from the English  
8 legislation and from the protection of a cooling  
9 off period.

10 MR. JOHNSON: I think this is outside  
11 the interest of the Committee, but I don't see  
12 any real reason to put a ceiling on finance charges  
13 on transactions between corporations or partnerships.

14 MR. SEDGWICK: I would have thought  
15 it wasn't necessary either.

16 THE CHAIRMAN: Mr. Kerr?

17 MR. KERR: Professor, on page 16  
18 you mention that legislation should encourage fair  
19 and open competition and not handicap one segment  
20 of an industry more than another or encourage  
21 deception of consumers under the guise of protection.  
22 I realize that most of your paper deals with revolving  
23 credit plans and cyclical budgeting. Insofar as  
24 conditional sales contracts are concerned, hire-  
25 purchase contracts and certain other types of time  
26 payment plans, do you think that by requiring the  
27 indication of an interest rate you would encourage  
28 deception of consumers by lenders or merchants?

29 MR. JOHNSON: I think it would certainly  
30 encourage deception of consumers by merchants. We had,

1 for example, a case in California where an auto  
2 dealer was advertising that he would finance your  
3 new car at 3% per annum simple. He would, but you  
4 did have to pay the full list price for the car.  
5 We had just this past week testimony in California  
6 again with respect to applications for industrial  
7 loan licences by Sears on the part of auto dealers,  
8 that if competition forced finance charges down  
9 they would be forced to raise the prices of automobiles  
10 from \$50 to \$250.00. And I think across the board  
11 we can -- again I go back to New York State and  
12 Dave Kapplevitz's book The Poor Pay More. In New  
13 York you have a pretty good All Goods Act which places  
14 a ceiling on the level of finance charges that may  
15 be received in financing all kinds of merchandise.  
16 And yet these door-to-door peddlars continue to  
17 operate and continue to sell \$2.00 shower curtains  
18 for \$20.00. So I don't -- I think that the imposition  
19 of a requirement for stating a simple annual rate  
20 would again effect those credit grantors whom you  
21 are really not worried about and would have no effect  
22 on those credit grantors whom you are most worried  
23 about.

24 MR. KERR: I just wondered if you  
25 don't think you could enact legislation that would  
26 prevent this?

27 MR. JOHNSON: Only unless you  
28 incorporated in that legislation price control. You  
29 would have to fix the cash prices of men's suits and  
30 so on. And you would have to tell Simpson's they

1 would have to maintain the same number of floorwalkers  
2 after the control as before --

3 MR. KERR: I mean more the, other  
4 than department stores, by merchant I meant car  
5 dealers.

6 MR. JOHNSON: With car dealers the  
7 same. The case I cited was an automobile dealer  
8 who said he would finance a new car at 3% simple  
9 interest.

10 THE CHAIRMAN: Mr. Rowe, do you have  
11 a question?

12 MR. ROWE: I am just mulling over  
13 in my mind here the question that was raised a  
14 moment ago, the implications of a cooling off period.  
15 We are concerned here with the cost of consumer  
16 credit, in this particular Committee. It would  
17 infer, if we had a 48 hour cooling off period, that  
18 we could only legislate or should decide whether this  
19 contract should be nullified and the goods returned  
20 and so on, first of all if it's a time payment deal,  
21 which precludes any action in connection with cash  
22 purchases. There are other reasons for probably  
23 wanting to return the goods besides the finance  
24 charges, which is our only concern here. Maybe your  
25 husband has talked you out of it or your wife has  
26 talked you out of it when you got home. Whether  
27 we should protect the purchaser or the vendor in a  
28 case like that is certainly a question that deserves  
29 consideration. Maybe they find the merchandise  
30 inferior. We are merely concerned with the credit

1 end of it. With a cooling off period you are going  
2 to prove, possibly, that you are taking it back  
3 because you can borrow it cheaper.

4 MR. MACDONALD: May I ask a question?  
5 A number of times this morning you said that the  
6 goods would be returned. In normal practice the  
7 goods would never have been delivered during the  
8 cooling off period.

9 MR. ROWE: You mean if this were  
10 made a law?

11 MR. MACDONALD: Yes. If this is  
12 made law, sure you have the 48 hour period to decide  
13 whether or not you are going to get the goods and  
14 the delivery is going to be made after, in effect,  
15 the contract is confirmed.

16 MR. LAWRENCE: The cooling off period  
17 would be after the contract is signed.

18 MR. SEDGWICK: That is right. That's  
19 the English provision. It has nothing to do with  
20 delivery of the goods. It is concerned only with  
21 the signing of the document.

22 MR. MACDONALD: And in practice the  
23 goods would never be delivered at all?

24 MR. SEDGWICK: I presume so.

25 MR. ROWE: I question that, Mr.  
26 MacDonald. If you went in and bought a coat, for  
27 example, I don't think the storekeeper is going to  
28 say we will wait til next Tuesday to deliver it to  
29 you. You can take it home if your credit is all right.

30 MR. WHITE: I think the merchant would

1 want to deliver the goods before the cooling off  
2 period because -- having a television in the home  
3 would firm up the deal. I think there would be quite  
4 a lot of that.

5 MR. ROWE: There are a lot of  
6 contracts -- for instance, I used to be in the real  
7 estate business. I feel that if a large percentage  
8 of the people that evening could have taken their  
9 name off that contract on second thought, they would  
10 have done it. It may be a house or it may be a  
11 refrigerator, but there are an awful lot of second  
12 thoughts that have nothing to do with the cost of  
13 credit. It has implications, that's all I'm saying.  
14 I'm not saying whether it is good or bad, but it does  
15 have implications when you finally get down to  
16 delivery of these things.

17 MR. BUKATOR: You mean you haven't  
18 really sold them on it.

19 MR. ROWE: Well, I mean I think many  
20 people have second thoughts that evening when they  
21 go to bed at night and the din is all down and they  
22 are lying there, they say: "Why did I get myself  
23 in for that", you see? Not necessarily finance charges.  
24 That isn't the point.

25 MR. KERR: As far as a cooling off  
26 period is concerned, aren't we going to have to  
27 distinguish between a person going into a store and  
28 taking the initiative and buying a product as opposed  
29 to a person being approached by a salesman. I can't  
30 see a cooling off period if a man walks in off the

1 street and decides to buy a coat.

2 THE CHAIRMAN: In a great many  
3 cases they would take the merchandise back if they  
4 changed their mind anyway.

5 MR. KERR: Maybe they would. But  
6 I don't think you should -- a fellow says: "I've  
7 had this coat for a couple of days and I don't  
8 like it after all" --

9 MR. WHITE: I think Mr. Kerr has  
10 brought up an interesting point and that is where  
11 does the initiative lie?

12 MR. ROWE: That would be pretty  
13 hard to prove.

14 MR. JOHNSON: We are basically after  
15 the door-to-door salesman.

16 MR. LETHERBY: The salesman may go  
17 to a person to sell him one item, though, and the  
18 customer gets interested in something else. You  
19 are going to have trouble differentiating who  
20 initiated that sale.

21 MR. JOHNSON: The customer can  
22 always walk out of a store where she can't walk  
23 out of her own home.

24 MR. LETHERBY: I think, Mr. Chairman,  
25 that Mr. Rowe and Mr. Kerr raised a very good  
26 and valid point here. I don't think that we  
27 would be favourably thought of, this Committee or  
28 new legislation, if we stuck strictly to a 48-hour  
29 cooling off period in all transactions. If I  
30 go into my neighbour's store in Coldwater with my eyes

1 open and I say I want that Chesterfield and that  
2 television set and that refrigerator and I will  
3 sign your bill of sale and your contract for  
4 financing and it is delivered. Now I don't want  
5 him to be held up for 48 hours when he knows me  
6 and I know the product I'm buying. This would apply  
7 to large department stores too, which I think would  
8 be most unfavourable. Now what we are trying to  
9 get at is the door-to-door salesman that --

10 MR. REILLY: No question about that  
11 at all.

12 MR. LETHERBY -- that shackled up  
13 that home that you spoke of. Now they are the boys  
14 and this fellow that sold the \$200 curtain for  
15 \$20.00. I've gone out selling life insurance.  
16 I sold a man a \$10,000.00 life insurance policy,  
17 he wanted it, I quoted him the rate, he gave me  
18 a cheque, he signed the application. God help me  
19 if he had come back in 48 hours and said: "I want  
20 that cheque back".

21 MR. REILLY: There is no doubt at  
22 all, Mr. Chairman, that what the members of this  
23 Committee are concerned about is the door-to-door  
24 salesman who takes advantage of the --

25 MR. JOHNSON: Simple wife.(Laughter)  
26 My wife would be simple enough to buy --

27 MR. REILLY: But there are compli-  
28 cations here, Mr. Chairman, that we must be very  
29 careful about. Some of them have been mentioned.  
30 So we can't just sweep in and say we should have a

1 cooling off period. I would like to give very  
2 serious thought as to whether it is advisable or  
3 not. As a matter of fact, I would be willing to  
4 say right now, Mr. Chairman and members of the  
5 Committee, that most reputable vendors have an auto-  
6 matic cooling off period now who operate businesses.

7 MR. JOHNSON: Therefore they would  
8 have no objection to a law.

9 MR. REILLY: What we want to do is  
10 get at the unscrupulous door-to-door salesman.

11 MR. JOHNSON: Let's pass a law that  
12 there can be no door-to-door salesmen. (Laughter)

13 MR. REILLY: Mr. Chairman, I wonder  
14 if the Professor would tell us or suggest how he  
15 would differentiate between those who are reputable  
16 and those who are not. In the United States I  
17 suppose they license all the door-to-door vendors.  
18 Is it done municipally?

19 MR. JOHNSON: Municipally, but it's  
20 entirely ineffective because the policeman in  
21 New York City has many more things to do than chase  
22 down door-to-door salesmen. So that while they are  
23 licensed their licensing is quite ineffective. I  
24 think the only way you could do it here is on a  
25 broad basis by limiting it to merchandise bought  
26 outside of an established retail establishment and  
27 you see this, in contrast to say the simple interest  
28 rate disclosure, costs those firms that already giving  
29 a cooling off period nothing, because they don't have  
30 to change their procedures or make any new calculations

1 or add a single person to the staff. So I don't  
2 think you are hurting them one bit. They are already  
3 doing it. But you are, I would hope, going to  
4 reach these door-to-door salesmen who are taking  
5 advantage of people.

6 MR. REILLY: You thought, Dr. Johnson,  
7 is that when they are licensed municipally then  
8 the problem is with enforcement?

9 MR. JOHNSON: The problem is with  
10 enforcement, yes.

11 MR. REILLY Would you like to tell  
12 us something more about your views between the  
13 commercial and the consumer credit? What is the  
14 difference?

15 MR. JOHNSON: Well, from an economic  
16 point of view and in the way that statistics are  
17 gathered, we would like to limit consumer credit to  
18 those transactions where a good or service has been  
19 acquired for the exclusive use of the consumer. But  
20 as a practical matter we have several alternatives.  
21 The problem, for example, again is the doctor who  
22 buys a Ford to drive around on his rounds and the  
23 Cadillac for his own personal use. How do you  
24 distinguish what was bought for credit for commercial  
25 purposes and what was bought for his own personal use.  
26 You can go by retail establishments, which seems to  
27 be the crux of the English law, but after all there  
28 are a lot of things sold at the retail level which  
29 are used for commercial purposes.

30 MR. REILLY: Excuse me, I am not

1 familiar with the English law in that connection. Would  
2 you like to elaborate on it?

3 MR. JOHNSON: I think he was quoting  
4 from the --

5 MR. SEDGWICK: From the 1964 Hire-  
6 Purchase Act. To sum it up, Mr. Reilly, it provides  
7 that if a sale is made at other than an appropriate  
8 trade premise, and then it defines an appropriate  
9 trade premise -- it's a long section, but it really  
10 means that these goods are regularly sold to whoever  
11 may come in -- and it is, of course, aimed at door-to-  
12 door salesmen. I would read the section, but it's a  
13 long section.

14 MR. REILLY: They make a difference  
15 then from the standpoint of the place of business.

16 MR. SEDGWICK: Well, it says an  
17 appropriate trade premise which in relation to a document  
18 means premises at which either the owner or seller  
19 normally carries on a business of goods of a description  
20 to which the document relates or goods of a similar  
21 description, are normally offered or exposed for sale  
22 in the course of a business carried on at those premises.  
23 So if you go into Eaton's and buy something, Eaton's  
24 are an appropriate trade premise. But if somebody  
25 comes to your door and sells you the shower curtain,  
26 then the document is not signed in an appropriate trade  
27 premise, then you have the four day cooling off period  
28 that you provide for, and if the goods have been  
29 delivered meantime there is a long and somewhat compli-  
30 cated section which provides for what you do with the

1 goods. You can redeliver them or tell them they are  
2 there, and so on. The document of obligation is  
3 voided if you see fit to void it within that four  
4 day period.

5 MR. REILLY: Does that include, say,  
6 magazines?

7 MR. SEDGWICK: I think it would  
8 include anything sold door-to-door, sold in other than  
9 an appropriate trade premise. It would not include  
10 magazines if, for instance, you went into a store  
11 like Eaton's and decided to subscribe. It deals with  
12 the place of transaction and not with the kind of  
13 goods. It could cover anything from automobiles  
14 to subscriptions to magazines. It comes into force  
15 on the first of January, 1965.

16 MR. JOHNSON: But to answer Mr. Reilly's  
17 question, consumer credit transactions excluding  
18 corporate transactions.

19 MR. SEDGWICK: Where the buyer is a  
20 corporate body, not, of course, where the seller --  
21 that is so in the Douglas Bill.

22 MR. ROWE: How does that work out  
23 with the mail order business. A person up in northern  
24 Ontario writes an order in and signs the magic papers  
25 and so forth.

26 MR. SEDGWICK: And gets credit that  
27 way?

28 MR. MACDONALD: The place of business  
29 is where he sends the order in, apparently.

30 MR. SEDGWICK: I would think so. It's

1 where the contract is signed.

2 MR. ROWE: More than 48 hours elapse  
3 before he knows whether he will get it.

4 MR. SEDGWICK: Well they have extended  
5 the cooling off period by this new statute to 4 days.  
6 My recollection is it was 48 hours. Am I not right?

7 MR. JOHNSON: I don't recall well  
8 enough.

9 MR. SEDGWICK: I'll look it up. I  
10 think it was 48 hours and they have now made it four  
11 days. The present bill flows almost entirely out  
12 of the Molony Report.

13 THE CHAIRMAN: Mr. Reilly, do you have  
14 anything else?

15 MR. REILLY: No. I would just like  
16 to say to Dr. Johnson that I certainly appreciate his  
17 brief and I will cherish some of his views.

18 THE CHAIRMAN: Mr. Irwin?

19 MR. IRWIN: This will only take a  
20 moment. Perhaps to get your views, Dr. Johnson, and  
21 to express mine and see if there is some area of  
22 agreement.

23 On page 9, for example, and I won't  
24 read it, you refer to the administrative difficulties  
25 of dealing with delayed payments, skipped payments,  
26 interrupted schedules and all this kind of thing. My  
27 own investigation from the point of view of going through  
28 the mathematical mechanics of coping with these situations  
29 and in talking to lenders who have to cope with these  
30 situations, that the use of properly prepared tables

1 actually reduces the problems to very minimal proportions.  
2 That the lenders now who are dealing with these odd  
3 situations are in fact using tables and they are  
4 tables that show salesmen readily and clerks readily  
5 the amount of charge to be made on a given balance  
6 for a given period of days. For instance under the  
7 Small Loans Act, one of the lenders, one of the larger  
8 lenders, whom I consulted on this, very proudly showed  
9 their ready reckoner thing for determining this. It  
10 poses no problem to them. I just suggest to you that  
11 tables, and I have developed some tables myself, with  
12 the help of a computer, that indicate that this problem  
13 may be somewhat overstated or overemphasized because  
14 the use of properly prepared tables can, with elementary  
15 training in their use, can cope with this situation  
16 rather easily.

17 MR. JOHNSON: One interesting point

1 Johnson, is that finance charges, whatever they may be  
2 from the table selected by the farmer way out in the  
3 country dealing with a mail order form. If those  
4 tables are prepared by the vendor on an actuarially  
5 sound basis, dealing or based on a rate which he knows  
6 he is getting and wants to get, the customer is not  
7 in any way involved in the determination of the rate.  
8 The rate is already incorporated in the table.

9 MR. SEDGWICK: Suppose the customer  
10 fills in the document, as Professor Johnson said, and  
11 merely picks out --

12 MR. IRWIN: From the table.

13 MR. SEDGWICK: No, no, the customer  
14 has no table. He just has a document saying that if  
15 you bought \$100.00 you are going to pay \$10.00 a month  
16 for 12 months, the finance charge is \$10.00. That's  
17 all he knows.

18 MR. IRWIN: Yes, but he has to get  
19 this information that if his balance, the amount that  
20 he must pay, is \$100.00, then he must have some thing  
21 provided him by the lender, that he is to add on \$10.00  
22 or \$20.00.

23 MR. SEDGWICK: Right, right.

24 MR. IRWIN: What I am saying, Mr.  
25 Sedgwick, is that the lender would prepare that data  
26 for the use of the customer on the basis that if he  
27 adds \$10.00, this \$10.00 is a rate.

28 MR. SEDGWICK: How does the seller know  
29 what terms the customer will select?

30 MR. IRWIN: He can select any terms he

1 wants.

2 MR. SEDGWICK: Right.

3 MR. IRWIN: What I am saying, Mr.

4 Sedgwick, is the table has to be there, but the table  
5 itself can be prepared by the lender based on an  
6 actuarial determination.

7 MR. SEDGWICK: But who is to fill in --

8 MR. IRWIN: Let the customer do that.

9 MR. SEDGWICK: All right -- wait a  
10 minute -- look where that leads you to. You say  
11 to the customer, you must fill in two things -- a  
12 dollar amount and the dollar amount expressed as a  
13 percentage. And suppose instead of filling in 18%  
14 he picks the wrong figure from the tables, as I am  
15 sure they would half the time -- then he fills in 15%.  
16 Would that invalidate the document?

17 MR. IRWIN: What I am trying to say  
18 is -- you are making it a much more difficult problem  
19 than in fact it is. Let me explain it. The customer  
20 is going to select his own terms and his own dollar  
21 charges. Right. But that information surely has to  
22 be provided for him in table form so he can look down  
23 the table and say -- "There is \$100.00, that's what I  
24 am going to owe. I am going to pay over a period  
25 of 12 months, so the amount to be paid each month  
26 is so much, and the amount I have got to add for finance  
27 charges is this amount." Now this is the point. The  
28 vendor in preparing that information and no other for  
29 the customer, simply says at the bottom of this table,  
30 "All of the figures on this table have been actuarially

1 calculated based on a rate of 18% per annum." And  
2 that's the end of it. No matter what the customer  
3 selects the table is going to be 18% per annum.

4 MR. SEDGWICK: Except, Mr. Irwin,  
5 that they aren't all 18% per annum. If he selects  
6 the 24 months payment it may be 17.2. If he selects  
7 the 12 months payment it may be 18.6. If he wants  
8 to pay it in 6 months it may be a quite different one.

9 MR. IRWIN: This isn't true, because  
10 if the table is prepared using a standard rate for  
11 every single calculation on the table, then every  
12 single calculation on the table will be 18%.

13 MR. REILLY: This is getting complicated.

14 MR. SEDGWICK: Suppose that isn't so,  
15 suppose that the rate is different for two money years  
16 than for one, as it may well be. So it won't be.

17 MR. MACDONALD: That would be based  
18 on the table.

19 MR. SEDGWICK: Well, but then you say  
20 to the customer you must look at the table and pick  
21 out the appropriate percentage and if you fail to do so  
22 you have invalidated the document because that, I  
23 understand, is the object of the legislation.

24 MR. MACDONADL: Well, as I understand  
25 Mr. Irwin, he is not suggesting he has to put in the  
26 percentage.

27 MR. IRWIN: No, he doesn't. He picks  
28 what he wants.

29 MR. MACDONALD: Because the table  
30 says if you are on a 12 year term you are paying 15%,

1 if you are on a 20 year term you are paying 12%.

2 This is on the table for his information.

3 MR. SEDGWICK: Well then, that's a  
4 departure because I understood the whole concept of  
5 stating a percentage was that it would be stated in  
6 the document of obligation.

7 MR. LAWRENCE: My God, he's got to  
8 fill in those six different spaces as it is, he's got  
9 to go down and total the amount he is going to borrow,  
10 the term of it and the amount he is going to pay back  
11 every month. Now you are not going to tell me that  
12 a good percentage of these Eaton's mail orders aren't  
13 already returned by Eaton's to the customer saying  
14 quite blankly to them you goofed, you filled in the  
15 wrong space there. What we assume you want is this  
16 and this and this. Would you please confirm it.

17 MR. SEDGWICK: Then you are going  
18 to add to it that he must fill in the percentage rate.  
19 Then if he makes a mistake, in order for it to be  
20 valid Eaton's must send it back and say you selected  
21 the rate of 17.3, it should in fact be 20.1. By which  
22 time he says that's too much trouble, I won't bother.

23 MR. OLIVER: Surely, Mr. Chairman, the  
24 customer doesn't have to fill in whether it's 15 or 18%.

25 MR. MACDONALD: As Mr. Irwin says, it's  
26 there for his information. That's all we ask is that  
27 the customer be informed, that's all.

28 MR. IRWIN: As long as the table he  
29 is going to use is on the form. Otherwise you are  
30 certainly going to have to include a percentage rate.

1 This is the whole purpose of the thing. As I see it  
2 the table is on the form and at the bottom of the table  
3 it simply says -- now you could have one column for  
4 the 12 month contract, you could have another for the  
5 15 month contract. All that table would show is the  
6 balance that I owe, the monthly payment I must make  
7 and the finance charges I must add. At the bottom of  
8 the table it would say, in effect, I don't know how  
9 legally it would say it -- if you select from column  
10 1 you are paying 18% per annum. If you select from  
11 column 2 you are paying 15% per annum. If you select  
12 from column 3 you are paying whatever percent per  
13 annum.

14 MR. SEDGWICK: If you select a skip  
15 thing you are paying some other percentage that you  
16 have no idea of.

17 MR. IRWIN: No. What I am saying  
18 is that the table would have to be prepared so that,  
19 and this is not mathematically difficult, that every  
20 amount shown on the table is exactly the rate stated,  
21 so you can't pick anything else except what's on the  
22 table and the table is determined on exact rates.

23 MR. LAWRENCE: That would mean that  
24 the table would have to be incorporated in --

25 MR. SEDGWICK: In the document of  
26 obligation.

27 MR. LAWRENCE: Then you would send  
28 them back a copy of their contract completed.

29 MR. SEDGWICK: Then if they completed  
30 it wrongly. They looked at, instead of at column 3, they

1 have looked at column 2 and they picked the wrong rate,  
2 then if the document of obligation is to be valid you  
3 would have to send them notification that you have  
4 changed it from 17.2 to 18.5, would you please initial  
5 the changes and send it back, and if he didn't do that  
6 they would have to send it back again.

7 MR. IRWIN: They don't require him to  
8 do that. I think the table is enough, the table itself  
9 is enough notice. Then after he has completed the  
10 contract as far as their amount is concerned and the  
11 amount of payments and the term, then they get a  
12 completed contract back. (rest inaudible)

13 I have said this many times. I have  
14 looked into this and have talked to these men and the  
15 fact is that they don't see that this would be such  
16 a terrible problem.

17 MR. WHITE:: Mr. Chairman, I want to  
18 underline the fact that a whole new idea is being  
19 introduced here because in all these considerations we  
20 have assumed that the amount of interest would be part  
21 of the contractual agreement. Now if a table or a chart  
22 on a wall or a table published in an advertisement in the  
23 paper -- I mean we are getting away from the idea that  
24 it has to be a clearly stated interest rate as part of  
25 the document. If it is printed on the document that  
26 brings up another point. If we choose that method of  
27 insuring disclosure then we are distorting the money  
28 market to some extent. If we say you have got to print  
29 it on the document and it has to be this simple rate  
30 of 18%, then the benefits which accrue to the larger buyer

1 or to the buyer paying over a longer period of time,  
2 the economies that enter into that would be distorted  
3 by the legislation.

4 MR. IRWIN: Could I comment on this,  
5 please, because when you suggest that a new idea has  
6 been introduced when, in fact, I don't think it has.  
7 What I thought I was responding to was the situation  
8 of the mail order house and the mail order house only.  
9 Now, I am a very pragmatic person. Mr. Reilly surely  
10 must understand that I am not interested in adding  
11 to the burdens of business. In every other form of  
12 contract I am sure you will recognize that the buyer  
13 sits there on the other side of the table and the  
14 seller sits here on this side of the table. And I  
15 would suggest to you that in 99% of lending arrangements  
16 made that will be the physical situation. In those  
17 situations I would not suggest that the table be incor-  
18 porated in the document. The lender has the table at  
19 his left-hand side and he says on the document this  
20 is a rate of --. What we were talking about was the 1%,  
21 possibly, of cases of the mail order house where there  
22 is not a physical juxtaposition of the buyer and the  
23 seller, or the lender and the buyer, but someone who  
24 is in a remote position. Now merely as an administrative  
25 convenience to deal with this problem and not destroy  
26 the concept of a declaration, then let the buyer have  
27 the tables. Let the tables be calculated actuarially  
28 so that every amount he reads off of that table will  
29 be at the rate stated. This is, in other words, if there  
30 is a little adjustment of the administration that has to

1 take place to accommodate the peculiar situation of the  
2 1%, surely this doesn't raise an entirely new issue  
3 in regard to every other contract.

4 MR. WHITE: Well that may be so, but  
5 I think, Mr. Chairman, that we have to acknowledge  
6 that the dollar amount is a much simpler device  
7 than a rate of interest, and as we explore the  
8 exceptions and unusual contracts of one kind or another  
9 then we find an infinite number of complexities being  
10 added. It is the simplest way to disclose. When  
11 we come up to revolving credit or to this new proposition  
12 and there are going to be many other we have to consider,  
13 I think we have to conceive that it is very, very  
14 much more complicated.

15 MR. JOHNSON: Mr. Chairman, if I could  
16 add a little more arithmetic in terms of Mr. Irwin's  
17 proposal. If you assume that Sear's sells items all  
18 the way up to \$800.00 -- I suspect there are some  
19 higher, but \$800.00 is what I took -- and allow them  
20 six variations in the sense of terms on contracts in  
21 his little tables, this already gives us 480,000 items.  
22 And then if you allow for variations to the extent of,  
23 say, a ten day lag, you can probably block off sections  
24 of the table -- you are back up to 4,800,000,000 for  
25 the consumer to read in the dollar finance charge which,  
26 after all, is the most important single item both to  
27 him and to the credit grantor.

28 MR. IRWIN: There are not 4 million  
29 entries for any one buyer. There is only a very few.

30 MR. JOHNSON: But you are going to give

1 him a catalogue with 4,800,000,000 --

2 MR. IRWIN: No, no, I heartily disagree  
3 with this and I have worked this out. I have taken  
4 tables that are now being used by -- taking a retailer's  
5 table. He is now using this table.

6 MR. JOHNSON: But you are going to  
7 change the system.

8 MR. IRWIN: No, no, I'm not going to  
9 change the system. If I may be allowed to explain.  
10 You take his table, and it's a very limited table.  
11 It's at present on one side of a piece of paper like  
12 that and it has columns of 6 months, 12 months, 15 months,  
13 18 months, 20 months and so on. And this is what the  
14 clerk is using. The only thing wrong with this table  
15 is that it is not done scientifically and mathematically  
16 correctly. It is done in broad ranges and lumped amounts  
17 to apply to ranges of contracts. And I have actually  
18 worked this out. I have taken the table that they  
19 say they want to use. Now if that table were calculated  
20 correctly so that at the bottom it says: All rates on  
21 this table are calculated actuarially at any figure you  
22 want, the lender selects the rate. There is no suggestion  
23 that he should be limited in what rate he chose. He  
24 simply sends his present table off to a publishing  
25 house that has an actuary on the staff or available  
26 and says to them: "I want this same table calculated  
27 so that every entry thereon will be 18% per annum, he  
28 will get a table back that will give him just that and  
29 he won't have this book, which I have prepared to cover  
30 all possible calculations, this book, taking this set of

1 tables in which there are 45,000 calculations, the  
2 actuary would calculate his table and at the bottom  
3 he could simply say that every amount quoted on this  
4 table represents 18% per annum. And that's all.

5 MR. SEDGWICK: But Mr. Irwin, suppose  
6 the retailer figures that on certain small transactions  
7 18% is inadequate and on large long term transactions it  
8 is excessive -- which I think he may well do --

9 MR. JOHNSON: He does. It's a matter  
10 of practice.

11 MR. SEDGWICK: Undoubtedly he would.  
12 Then what do you do?

13 MR. IRWIN: Just the same thing. Send  
14 the table to the actuary and say: "In regard to  
15 balances under \$100 and six months' duration I want  
16 a rate of 24%, on balances between \$100 and \$200 in  
17 excess of six months duration and up to 18 months'  
18 duration I want 22% --

19 MR. SEDGWICK: All right, go on.

20 MR. IRWIN: And for balances of over  
21 \$200.00 and up to 36 months, let's say, I want 15%.  
22 The actuary will work it out for him.

23 MR. SEDGWICK: I know, but it isn't  
24 only that number, it's all the other possible combinations  
25 and all that would have to appear on the document which  
26 you send to the purchaser.

27 MR. IRWIN: But there will be no other  
28 combinations, and I have checked this out.

29 MR. SEDGWICK: Why not --

30 MR. IRWIN: A retailer doesn't want now

1 to complicate his arrangement unduly. And what he  
2 does, and there is an illustration in the Small Loans  
3 Act, as I demonstrated before. You put to me last  
4 December a question about \$1,090.00 for 19 months and  
5 what is the rate? But in practice you see, you  
6 couldn't get that deal from the small loans people  
7 because they realize how fantastic the calculations  
8 would be if they provided any amount of money  
9 to anybody for any period of time. So if you into  
10 this company they will say well, that's fine, our  
11 tables don't provide for \$1,090.00 for 19 months.  
12 The nearest we can offer you is \$1,000.00 for 20 months  
13 and that's what you would get.

14 MR. SEDGWICK: I see.

15 MR. IRWIN: So what I'm suggesting  
16 is that to suggest that you are throwing at the  
17 retailer a vast series of computations is not practically  
18 true because the retailer or the vendor decides from  
19 all these possible computations the most suitable  
20 one set of circumstances to cover an approximate  
21 situation. So if you want \$1,090.00, he won't loan  
22 you that.

23 MR. SEDGWICK: He's selling merchandise.  
24 He may have an article that sells for \$1,090.00

25 MR. IRWIN: Then he adjusts your  
26 downpayment to bring it into the table.

27 MR. SEDGWICK: I'd like to get six  
28 intelligent High School students and sit them down  
29 sometime and put before them some of these proposals  
30 and see how many of them solve them rightly.

1 MR. IRWIN: Oh, they couldn't possibly.  
2 I have never suggested that they could.

3 MR. SEDGWICK: No, I don't think they  
4 could either. And you suggest some farmer in the  
5 back concession --

6 MR. IRWIN: But again the same thing  
7 applies. A man comes in and says that he wants to  
8 buy some odd amount and the clerk looks at the table  
9 and says: "Gee Whiz, that situation isn't covered, so  
10 you have to pay this much as a downpayment in order  
11 to bring me into my table. That's what they do in  
12 practice.

13 MR. WHICHER: Mr. Irwin, isn't a life  
14 insurance manual like that. I mean you can buy \$1,000.00  
15 worth or \$1,500.00 worth or \$1,200.00 worth or  
16 \$10,000.00 worth for 15 years or 20 years or 25 years  
17 and it's all there in the book.

18 MR. IRWIN: That's right. I have never  
19 suggested at any time in this Committee suggested that  
20 the clerk at any time should make the calculations,  
21 and I would withdraw anything I have ever said if I  
22 thought that that was going to be the result. I have  
23 said that the clerk should be provided with a table that  
24 is calculated actuarially. The clerk will do no  
25 calculations whatsoever, nor will the salesman talking  
26 to the farmer on the fender of a tractor. He is  
27 provided with a table and the table is determined  
28 actuarially.

29 MR. SEDGWICK: What would happen to  
30 the man with the mail order who sends in the document?

1 MR. IRWIN: He would be provided  
2 with a table, asked to make his selection and he  
3 would automatically determine his own rate.

4 MR. SEDGWICK: I'm a great optimist  
5 but I don't think it would work.

6 MR. WHICHER: The point is the table,  
7 coming back from Eaton's to the customer, so that it's  
8 right there that it's filled in -- 18% or 22% -- we  
9 really don't care what goes from me to Eaton's, it's  
10 when it comes back, the contract sealed and signed,  
11 to me and I know that I'm paying 18% or 21 or whatever  
12 the case may be, and surely Eaton's are in a position  
13 to do it.

14 MR. SEDGWICK: As a matter of law I  
15 would have thought that something that the buyer  
16 puts in the contract after you have signed it is not  
17 binding on you at all, and may conceivably invalidate  
18 the contract.

19 MR. IRWIN: I admit I don't know anything  
20 about the legal side of it.

21 MR. LAWRENCE: It's sent back.

22 MR. SEDGWICK: To be signed?

23 MR. LAWRENCE: Sure. You don't just  
24 take the farmer who says I want to buy a \$1,000.00  
25 article and spread it over 20 years.

26 MR. SEDGWICK: But I think what he  
27 does precisely is take the order form out of the  
28 catalogue and if he wants to buy a new suit and two  
29 pairs of shoes and so on and fill that in and fill in  
30 the prices and says he wants to pay over six months -- I

1 see from your table --

2 MR. LAWRENCE: Does he also put in  
3 the amount he is going to pay?

4 MR. SEDGWICK: Sure because it's  
5 in the table.

6 MR. LAWRENCE: If he's got to fill  
7 in those things, what's wrong with also putting in the  
8 percentage rate.

9 MR. REILLY: Why add complications?

10 MR. SEDGWICK: Now let's wait a  
11 minute. Supposing he doesn't.

12 MR. LAWRENCE: If he doesn't, the  
13 same as happens now, the thing is invalid.

14 MR. SEDGWICK: But that doesn't happen  
15 now at all.

16 THE CHAIRMAN: Are there any other  
17 questions, gentlemen?

18 MR. IRWIN: On page 18, I just want  
19 to cover another point of reconciliation. You suggest,  
20 Dr. Johnson, on page 17 and the top of page 18, that  
21 if there were a transfer of the finance charges to  
22 the price of the article, presumably in the case of  
23 revolving credit accounts and for department stores,  
24 that  $1\frac{1}{2}\%$  must be charged adds up to  $5\frac{1}{4}\%$  of the total  
25 cost of the merchandise. Now you may have some meaning  
26 there that I don't understand, but I have looked into  
27 this problem too in this sense; supposing that the  
28 large department store was forced to comply with this  
29 disclosure requirement and he didn't want to. So he  
30 abandons his service charges altogether -- the  $1\frac{1}{2}\%$  -- and

1 recovers by raising prices, across the board. I have  
2 checked this out with one of the large department  
3 stores here on their own data, and the result of  
4 abandoning the service charge altogether would be  
5 to add approximately -- and this is an estimate --  
6  $3/4$  of 1% to the cost of all merchandise. Now how  
7 does that reconcile with your  $5\frac{1}{4}\%$ .

8 MR. JOHNSON: Well, that is why I  
9 said up to, because not all sales are credit sales.  
10 This would be presuming all sales were on credit, then  
11 there would be an addition of  $5\frac{1}{4}\%$ , but your figure  
12 is more realistic than mine and supports my point.

13 MR. IRWIN: In effect the abandonment  
14 of the service charge for the large department stores  
15 they estimate would result in an increase across the  
16 board of  $3/4$  of 1%.

17 MR. JOHNSON: This, I presume, would  
18 be a fairly low portion of credit sales.

19 MR. IRWIN: Or  $3/4\%$  in every dollar  
20 of sales.

21 MR. JOHNSON: Which would be very easy  
22 to bury then.

23 THE CHAIRMAN: Any other questions,  
24 gentlemen? Well, Professor Johnson, we are very in-  
25 debted to you for coming here this morning and giving  
26 us the benefit of your advice and presenting to us a  
27 very excellent brief.

28 Your brief has prompted a great deal  
29 of discussion and that's what we are here for to get  
30 the answers and you have given us some that we hadn't

1 had before and we are very interested in the position  
2 that you have taken. We have heard about your reputation  
3 and it has been very pleasant having you here today.

4 Thank you again, on behalf of the  
5 Committee, for coming.

6 Gentlemen, before this meeting is  
7 adjourned we plan on meeting in two weeks' time, if  
8 we can arrange to hear the door-to-door people for  
9 the next three meetings. Following that we will have  
10 a trip to Ottawa and then to Washington if that can  
11 be arranged.

12 ---WHEREUPON THE MEETING ADJOURNED.
